Extremely compact, tip jacks are available in horizontal or vertical contact types—all occupy a minimum amount of board area, yet provide easy access and positive electrical contact. Rated at 5 amperes maximum current capacity. Operating voltage is 1500 volts RMS at sea level and 350 volts RMS at 50,000 feet. Contact resistance is less than 2 milliohms; capacitance between two adjacent jacks less than one pF. at 1 MHz. Body material is made of tough, low-loss polyamide per MIL-M-20693A; able to stand extremely hard usage. Tip Plugs have a one-piece machined contact which provides maximum reliability and achieves minimum contact resistance—jacks equipped with beryllium copper contacts, designed for firm, positive contact as well as fast, easy insertion and withdrawal. Jack contacts and terminals are silver-plated.

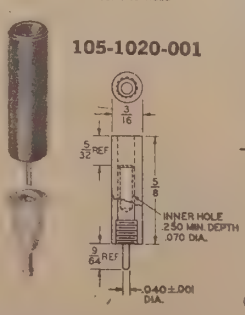
Rib-Loc™ terminals and jacks

With Johnson Rib-Loc insulated components, commercial equipment designs can reflect size reductions formerly limited to military equipment applications because of high cost. "Rib-Loc" design offers excellent retention—considerably better than the most widely used TFE insulated types. Terminals are brass, silver-plated and iridited for good solderability.



Specifications, all "Rib-Loc" components:

Pullout force 21 lbs.; turning torque 18 oz. in.; capacitance, .050" thick panel at 1 mc., 1.00 pf.; flashover voltage (DC) 5300; max. service temperature 250° F.; leakage current at 3500 VDC, .01 ua. These are typical test measurements, not necessarily limit values.

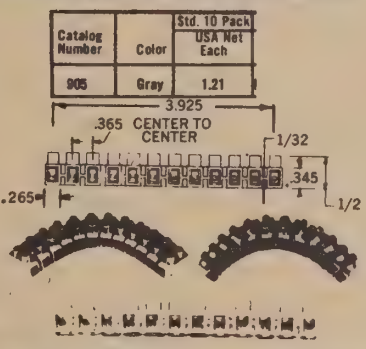
Like Type No. 905, the No. 900 terminal block is solderless, and is molded of hard black polyvinylchloride. Push buttons are molded of red polyvinylchloride.

These terminal blocks have extremely high dielectric properties and are approved to resist 440 volts or 500 volts when mounted on insulated surface. Maximum current 27 amperes, maximum heat capacity 70° C. Maximum wire size applicable AWG #12. Maximum contact pressure: 13.22 lbs. Connection of conductor is extremely fast. Press the red button and insert the wire. Release pressure for locking. The beryllium copper contacts are molded into the block. Type 900 is available for 24 connectors. It may be cut to smaller size if required.



905 SERIES • FLEXIBLE

Type No. 905 Solderless Terminal Blocks are specially designed for applications where space and weight conservation are important factors. Because they are molded of flexible polyvinylchloride material they may be bent in any direction to fit contours and sharp angles. Typical applications for these terminal blocks include missile guidance systems, computers, aircraft communications, underwater detecting equipment, etc.

The shortest distance between the live parts of Type No. 905 Terminal Block is 3/8". Its brass terminals will accommodate a #10 wire as a maximum. The polyester material of which the blocks are made is rated at max. of 30 amps, 380 volts, or 440 volts if mounted on insulated surface. Maximum heat capacity: 60° C. Insert conductor in block and tighten the set screw.

Flexible Terminal Block No. 905 measures 3-$^{29}/_{64}$" long, 5/8" wide, 1/2" high and 11/32" between terminal centers. It may be cut to smaller sizes as required.

MICRO-GATOR CLIP

(Smallest Insulated Clip Ever Made)

U.S. Patent No. 2,762,028 Trademark Reg.

Micro-Gator

Micro-Gator with Insulator

The alligator clip with the microscopic tip! This is the alligator clip you now can use where no other clip will do . . . on printed circuits, in tight spots and on tiny terminals too crowded for anything but its microscopic tip. Including separate skin-tight insulator the tip is no bigger than the head of a pin! Yet the Micro-gator has ample thumb grip, and plenty of bite to stand up straight on the smallest terminals. Ample 1/32" jaw spread. 1 3/32" long. Solder connection. Skin-tight flexible vinyl insulator (sold separately) has "lip-action" tip slot so that jaws stay covered whether open or closed.

Crimping ears. Solder connection. Surprisingly strong bite penetrates corrosion and coatings.

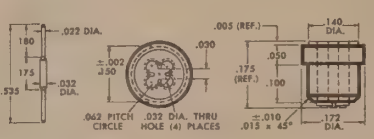
PRESS-FIT® TEFLON* CLOVERLEAF® RECEPTACLES



. . . providing the economies of dip-soldering with the inherent reliability of wired chassis construction

The "Press-Fit" Cloverleaf Receptacle provides economical yet uniformly perfect solder joints by means of dip soldering on a metal chassis. The unique Cloverleaf configuration permits insertion of four or more wire leads, plus an optional center post for mounting additional components after the dip-soldering operation. This design provides an encompassing hold on the leads, while providing for excellent capillary flow of solder. The Cloverleaf receptacle is a Sealectro "Press-Fit" design. Virgin Teflon insulation, precisely machined to "Press-Fit" into the chassis provides fast, positive and economical installation.

The reliability of dip solder joints made with the Cloverleaf receptacle, combined with the inherent dependability and repairability of metal chassis construction makes it ideal for use in high density, complex electronic instrumentation packaging, while the low cost of the terminal and its simple installation provides a new and outstanding assembly technique for premium quality radio and television manufacturing.

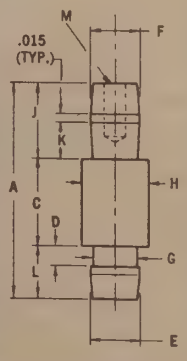
PRESS-FIT® TEFLON** SPACER/BUSHINGS

The Newest and Best Way to Mount P.C. Boards to Metal Panels and Chassis

Mount and insulate P.C. boards on metal chassis or panels without nuts, bolts, or lock washers. The new Press-Fit Teflon* Spacer/Bushings save assembly time while providing an economical and mechanically secure mounting device.



Machined from pure Teflon*, these new units are designed for various thickness P.C. boards and chassis or panels. Insertion in the chassis is a simple, one-step operation. The grommet end of each Spacer/Bushing is simply snapped in pre-drilled or punched metal chassis holes with entrance edge broken. Once inserted, they're in for good. P.C. boards require only mating holes for the opposite end of the Spacer/Bushing and may be snapped on and off of the mother board at will.

NOTE: Mtg. Hole .152 ±.002 Dia. in .062 ±.006 thick chassis.

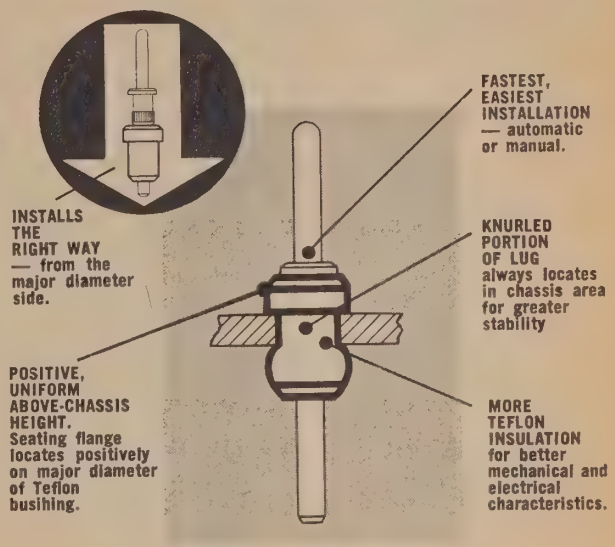
Rivet-Loc™ patented



TEFLON INSULATED TERMINALS

Rivet-Loc terminals overcome all the inherent shortcomings of the older semi-assembled design which assembles by pushing the metal lug into the minor diameter of the Teflon bushing. Whereas the original semi-assembled design depended upon the mass of the metal lug displacing the Teflon, the Rivet-Loc employs a simple **Riveting** and **Locking** of the Teflon bushing assuring a better finished installation.

Rivet-Loc is installed in one simple, smooth operation with all insertion forces working together, instead of against each other as in the case of the previous semi-assembled design. Thus, the final seating and locking of the terminal in the chassis is uniform, even with wide parameters of tool settings.

Proved in millions of installations, Rivet-Loc not only offers far superior mechanical characteristics, it also has proved more dependable electrically. The smaller metal lug mass in proportion to the Teflon bushing provides far better dielectric strength. This extra protection of pure virgin Teflon enhances the dependability and performance of your equipment.

The numbers listed here are currently considered standard. However, new numbers are being added constantly. Virtually any terminal configuration or requirement can be met with the Rivet-Loc concept. Submit your requirements to Sealectro.

TRANSISTORS AND IC HARDWARE

SOCKETS AND HOLDERS

Low cost, high precision sockets and holders for transistors and integrated circuit packages are now available with virgin Teflon bodies that Press-Fit into chassis. The Sealectro Series 60 Sockets permit you to plug-in and remove various TO-18, TO-5 can and I.C. packages at will. The precise contact design provides a positive mechanical grip while making electrical contact with minimum resistance. Sealectro offers a complete off-the-shelf line. Write for catalog.

BUSHINGS AND PADS

Included in the Press-Fit line of Transistor and I.C. Hardware is a complete selection of Teflon bushings and pads to fit virtually every transistor and I.C. package. Press-Fit or grommet style bushings which provide support for transistor can or thru chassis hole for leads are offered. Pads to relieve strain on glass seals are also available. They are designed for use where semiconductor units are wired directly into the circuit and to insulate it from the mounting surface. Write for complete catalogs.

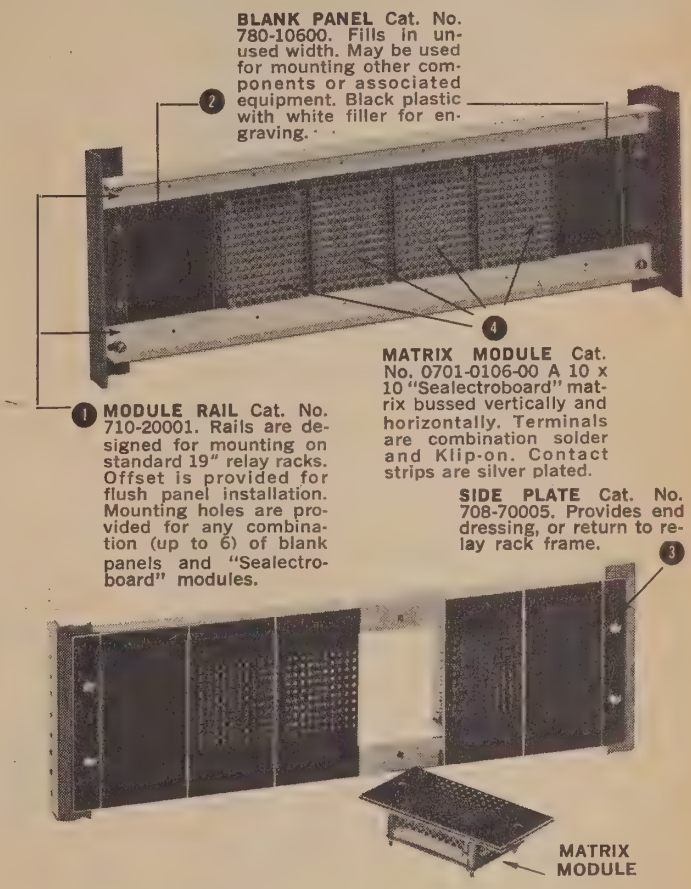
SEALECTRO PROGRAM SWITCHING

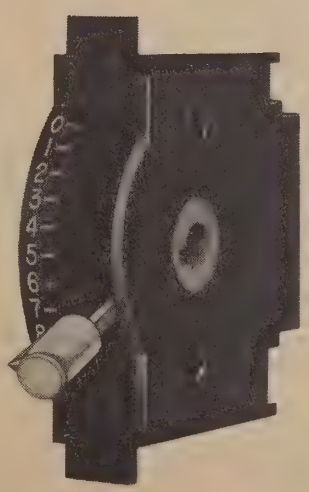


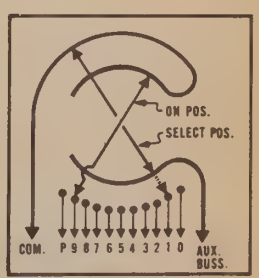
SEALECTROBOARD® MODULAR CORDLESS PROGRAM BOARDS *

ealectroboard" programming and switching provides com-ite ease and simplicity of operation with drastic reduc-ns in hardware and space. The units consist of two cks of bussed contacts running at right angles to each ier in the X and Y directions, forming an electrical trix. A single shorting or component holding pin is used complete the program circuit . . . move the pin to a new ation and a new program function is generated.

e "Modular Sealectroboard" provides an extremely flex-e means of program system expansion with a built-in pearance. The system consists of only four standard mponent assemblies, designed such that when installed a standard E.I.A. 19" relay rack, or bench cabinet, they ult in a very attractive unit.

e "Modular Sealectroboard" can be expanded from a x 10 hole matrix to a 10 x 60 hole matrix in one stan-rd 5¼" x 19" rack panel. Additional panels can be ded and interwired to expand program capacity as sys-m requirements dictate.



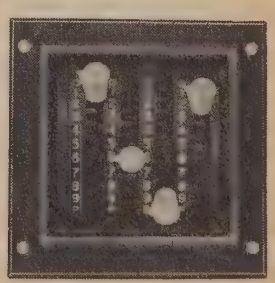


* Available off-the-shelf from Authorized Local Sealectro Distributors.

SLIDE 'N SWITCH™

RANDOM ACCESS PROGRAMMING CIRCUIT SELECTOR

- Exclusive random access to any circuit from any circuit.
- Up to 10 times as fast as thumbwheel switches.
- Modular expandable design.
- Compact. 2⅜" high. Each switch module 11/32" wide.
- Economical. Costs far less than average thumbwheel switch.
- Guaranteed for 250,000 operations per contact minimum.**
- Terminates in standard PC card connector, or hard wire.



An entirely new and different switching concept with maximum versatility built-in, Slide 'n Switch provides **direct choice** of output circuit without switching electrically through intermediate points. While in transit, the common side is connected through a termination on the rear of the unit to indicate the "in transit" situation or can be used as an electrical interlock.

This precision switch can be set in a fraction of the time required for thumbwheel units, as the handle is simply pulled out and swung in a single movement to the desired circuit.

Terminations on the rear of the switch module are printed circuit, spaced .125" center to center, and will mate with standard edge-mount pc card connectors. Terminal holes are also provided for hard-wiring with solder joints.

Completely modular, the switch modules are mounted on a threaded rod in any number desired. End caps complete the bezel for front panel mounting.

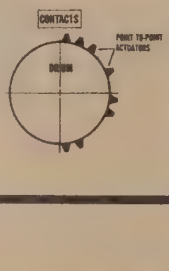
SEALECTROSWITCH®

SERIES S-500 FIELD ADJUSTABLE PROGRAM SWITCHES



- 1, 7, and 15 Ampere Contacts
- Accurate Actuator Alignment Lines for Ease of Program Set-Up and Changes
- Manual, Stepping Motor and Timing Motor Drives
- Removable Drums
- Extremely Strong Extruded Frame for Durability
- Modular Contact Construction for Easy Field Replacemen
- Both Camming and Point-to-Point Actuators
- High Visibility Drum Position Indicator
- Precisely Extruded Drum for 100% Program Repeatabilit

Sealectroswitch is a precision electro-mechanical timing and programming device featuring sliding actuators which may be positioned to select the operation of any, all or no contacts at any single drum position in the field and without special tools. A rigid frame, combined with a precisely extruded aluminum programming drum assures timing accuracy and program repeatability. A variety of options on contact ratings, drum drives, actuators, number of drum positions, and number of contacts assure the maximum in programming and timing flexibility for every conceivable application.

Both camming and point-to-point actuators are of fered with standard model Sealectroswitches. The camming actuators, when mounted in adjacen program drum positions, do not allow the contacts to "break" between program steps. The point-to-point actuators allow the contacts to open between program steps. A three-in-one insertion tool is available for camming type actuators only and is pre-loaded with 100 actuators in black, red, blue o white for easy program set-up and identifications.

"LCT*" SEALECTROTIMER

. . . FIELD ADJUSTABLE, MULTIPLE FUNCTION, LOW COST PROGRAMMING SWITCH

- Economical, precise programming
- Sets up in seconds with 100% repeatability
- Up to 60 ON/OFF functions per revolution
- 15 Amp contact rating

Here's the answer to those many timer and programming problems. A unique combination of complete field adjustability, 100% repeatable, and multiple ON/OFF functions. No loose parts. No changing of cams. Everything required for complete flexibility in a single, compact, economical unit designed for extra-long life.

60 drum positions, precisely fabricated in at factory, permit up to 60 ON/OFF functions in a single 360° operation on a single contact. The drum is indexed, eliminating guesswork in set-ups, and also guaranteeing 100% repeatability when re-setting to a former program.

Actuators are merely slid by hand, to or out of operational position. In seconds, set up a complex timing program with varying time dwells for ON/OFF functions. In seconds, set up a pulse generator capable for supplying precisely timed pulses in various groups.

And all this costs no more than ordinary overlap type cam timers that provide a single ON/OFF function.

ARROW, HART & HEGEMAN "SNAP ACTING" MOMENTARY CONTACT SWITCHES

PRECISION SNAP-ACTING SWITCH A precision snap-acting switch is a mechanically operated electric switch having predetermined and accurately controlled characteristics, and having contacts other than the blade and jaw, or mercury type, where the maximum separation between any butting contacts is 1/8 inch.

MOMENTARY CONTACT SWITCH A momentary contact switch is a switch which returns from the operated condition to its normal circuit condition when the actuating force is removed.

ACTUATOR An actuator is the mechanism of the switch or enclosure which, when moved as intended, will operate the contacts.

SWITCHCRAFT® INC.

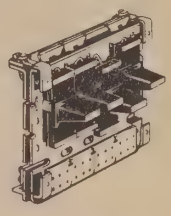
Switchcraft switches give you unlimited latitude in the selection of switching functions and actuation for customizing your equipment designs. Whether you choose pushbutton, slide or lever actuated switches, Switchcraft Authorized Industrial Distributors can aid you in the selection and specification of the proper switch to fill your particular requirements. All "Multi-Switch"® switches are factory-assembled to your specifications or select one from the standard listing shown in this catalog. Factory assembly, plus rigorous inspection and testing, is your assurance of optimum performance and dependability.

"MULTI-SLIDE" SWITCHES
SERIES 39000



Revolutionary compact switching method provides versatile multiple station slide switching. Allows 1 to 18 stations per row standard on all but all-lock function which is limited to 12 stations. Requires only ¾" depth behind panel. Narrow frame design permits mounting on compact electronic equipment without sacrificing versatility or function. Three standard functions available: **Interlock:** actuating slide-button automatically restores previously actuated station to normal. Only one slidebutton can be actuated at a time with standard interlock function. **Non-Lock:** each station has momentary action with no interaction between stations. **All-Lock:** all stations, except release, lock when depressed—restore to normal when release button is actuated. Special slide-to-release cancelling feature in interlock and all-lock switches permits immediate correction of switching error without cancelling actuated switches. Slide-buttons are on ⅝" centers. Up to 3 miniature switch stacks, rated at 3 amps; 300 watts max., AC non-inductive load, can be mounted at each station for a minimum of 1-A (SPDT) to a max. of 3-C (3PDT) per station. For power switching, snap switch modules can be mounted to each station on special order. Refer to "PIGGY BACK" SNAP-SWITCH MODULES, Series SA, SC and SD under littel "Multi-Switch" listing. Switches mount on panels up to ⅛" thick. End brackets have four 6-32 tapped mtg. holes. A black slidebutton is furnished for each station and a red slidebutton is supplied when switch requires a release. A kit of chromatic legend tabs, Part No. K-120, is available for positive color coding of an actuated station. Kit consists of 10 tabs each of 6 colors: Red, black, green, blue, white and yellow. Pressure sensitive tabs mount easily in recess of slidebutton; can be hot-stamped for identification. The following part numbers cover a completely assembled switch, in various functions, with 2-C switch stacks at each station. Only the most commonly used switches are listed here.

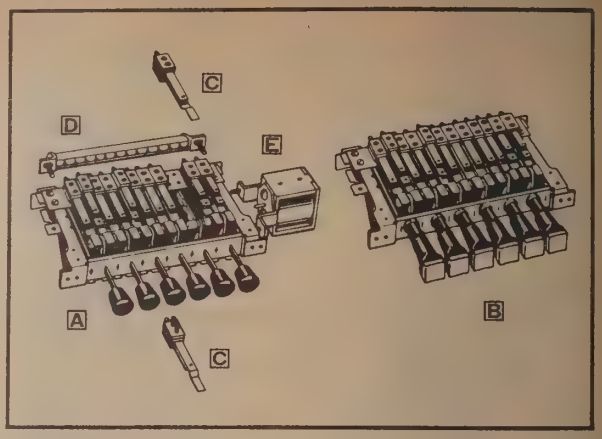
"GLO-BUTTON" PUSHBUTTONS
SERIES X, Y, Z



Economy of non-illuminated buttons with the vivid color-legend display of illuminated buttons. "Glo-Button" pushbuttons look and function like an illuminated button, but require no lamp or power. Mount on all pushbutton switches with standard .050" x .187" plungers, as Switchcraft Series 7000, 8000, 35000, 70000 and 71000 "Multi-Switch" ® switches, and other switches having maintained plunger action with a maximum of 1/16" fallback. "Glo-Button" pushbuttons have a translucent front screen on which a legend is marked in an opaque color. The opaque color provides a background for the legend while the legend itself remains clear (Figs. A). An internal fluorescent illuminator is carried on a pusher which has two legs extending from the rear. When the button is depressed, the rear legs of the pusher bring the fluorescent illuminator flush with the screen which then lights up due to reflected ambient light, and projects a clearly visible legend, see Figs. B. All "Glo-Button" pushbuttons have black button housings and are available with standard legends: "A" thru "Z", "0" thru "50", and "ON", "OFF". Eight basic types of buttons are offered: To order, specify part number and add suffix letter or numeral to part number which describes desired legend. Example: To order ½" sq. "Glo-Button" pushbutton with black screen, orange-red illuminator and numeral "7" part number would read X21248-7.

PATCH CORDS, JACK PANELS AND TELEPHONE PLUGS: Audio, Broadcast, Miniature

TRIMM patch cords feature telephone type plugs on cords built to withstand hard use. Two or more conductors of bronze tinsel are covered with numerous layers of insulation and waterproofing. The cords are color coded, shielded (if desired) then covered with a final braid of nylon to assure long service. The nylon is standard black unless a color is specified. Available at a slight extra charge are: Blue (BL), Brown (BR), Green (GR), Red (RD), Slate Gray (GY) and White (WH).

"840" PATCH CORDS

Broadcast type "506" twin plugs at both ends. Conductors are wired to tip and the shield (when used) is connected to the grounded shaft. Commonly supplied with shield attached at one end only. Available without shield (W in code number), or with shield attached at both ends (X in code number). PP indicates the cord has a plug at both ends.

TERMINAL BLOCKS, TURN AND PUSH KEYS, LAMP SOCKETS: Related Panel Equipment

TERMINAL BLOCKS

Originally developed for telephone and telegraph exchange use, now are quite generally found in broadcast and microwave relay stations, large instrument systems —wherever very large numbers of circuits need convenient places of termination.

Terminals are of three basic types: standard solder types, wire wrap type, and hybrid wire wrap on one side, solder on the other. All are of 0.040" brass, tinlate plated. Standard solder type available in four different lengths with "butterfly" notched design assuring retention of wire. All blocks having numbering along the top row. Available in 6 Construction Styles

INSULATED

INSULKRIMP®

INSULKRIMP® terminals and connectors incorporate all the advanced features of KRIMPTITE construction, plus the advantages of the permanently attached rigid vinyl plastic insulating sleeve. Up to No. 10 wire range basic barrel is Krimptite; size No. 8 and up uses Versakrimp (brazed seam) barrel. Replacing slower methods of individually insulating connection with tubing or tape, INSULKRIMP Terminals and Connectors are rapidly applied in a single application. The tough insulating sleeve is permanently attached and will not slip off, fracture, or unravel. In addition, INSULKRIMP construction affords increased vibration resistance due to its insulation supporting plastic sleeve. Operating Temperature Range: continuous duty from —40° to 220°F; intermittent duty to 300°F.

NYLAKRIMP®

Wire Ranges 8 thru 4/0 Has the same features as the Versakrimp except that it has a Nylon insulated sleeve. Nylon Sleeve ideal for high temperature applications.

AVIKRIMP®

AVIKRIMP® terminals are truly the ultimate in construction and performance. To all the VIBRAKRIMP features has been added the permanently attached and overlapping NYLON insulating sleeve — no extra insulation necessary. It provides extra barrel strength and insulation grip to resist high vibration plus heat-resistant pre-insulation. Color coded for rapid identification, these terminals are complete in themselves, needing only the proper wire and crimping tool. WALDOM offers many sizes and types with the maximum in reliability for your most critical applications. Operation Temperature Range: continuous duty from —40° to 250°F; intermittent duty to 350°F.

NON-INSULATED

KRIMPTITE®

KRIMPTITE® terminals and connectors are the most modern labor saving answer to your wiring problems. Functionally designed to make positive connections with a minimum of experience and time needed for application. Uniformly reliable connections can be made in a fraction of the time formerly required by less reliable and more costly methods. Available in a wide range of types and sizes to meet your every wiring need. Minimum ¼ inch barrel lengths are available in all terminals listed.

VERSAKRIMP®

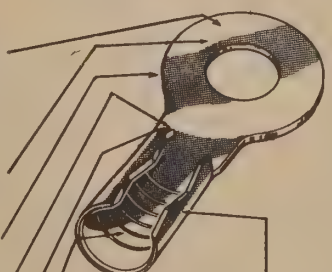
VERSAKRIMP® terminals and connectors have all the advantageous features of the KRIMPTITE construction plus the universality and higher tensile strength afforded by BRAZED BARREL construction. The seam is bonded with a special silver brazing alloy, and cannot possibly pull open under any conditions of stress or wire pull. Capable of being crimped by a wide variety of crimp styles, a new freedom of selection is available for your needs. Crimping location is not critical, as the specially brazed seams are guaranteed not to split and may be crimped from any direction. Recommended for both stranded and solid wires.

VIBRAKRIMP®

VIBRAKRIMP® terminals are particularly suitable where high vibration is a factor and firm insulation support is required. The seamless annealed electro-tin plated brass sleeve adds over-all strength to the terminal construction while the "skirt" portion which extends beyond the barrel is crimped in the same operation as the barrel and the wire is permanently held, preventing creep. Insulation is anchored and any wire flexing takes place beyond the terminal.

BASIC TERMINAL CONSTRUCTION DETAILS

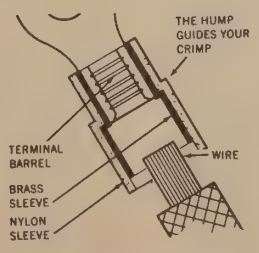
Made of pure electrolytic copper for highest conductivity (MIL QQC576). Annealed to flow freely under crimping pressure for best connection. Electroplated with pure tin for greatest corrosion-resistance, in accordance with the highest standards of the electrical industry and MIL-T-10727 (Ord.).



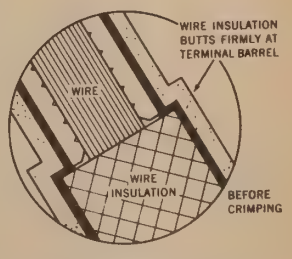
Modern construction from a single piece of metal gives greater strength, lower cost, uniform current flow for maximum conductivity.

All terminals and connectors have wire range clearly stamped on back.

The open-end design allows quick visual inspection of wire location before and after crimping.



Strength gussets reinforce terminal where flat tongue has been formed into round barrel.



Multiple deep V-notches securely grip wire, provide best contact and maximum holding power over wide contact area.

Long barrel in all sizes eliminates loss of time finding a critical crimping location, eliminates squeeze-outs and shearing. Allows wider crimp for extra-strong, vibration-proof, moisture-tight connection with wide contact area.

Chamfered edge for faster, easier insertion of wire. Actually gathers frayed strands by funnel action.

"STEP" CONSTRUCTION GIVES EXTRA PROTECTION

Cutaway views of an AVIKRIMP barrel show how the "step" design for the brass sleeve acts to socket the wire insulation solidly in both the AVIKRIMP and VIBRAKRIMP styles for the ultimate in anti-vibration protection. In addition, the external "hump" marks the exact location of the barrel end — a quick guide to the target.

FOLD-OVER SOLDERLESS TERMINALS

Designed to give a trim appearance to otherwise unsightly wire connections. They fold neatly over the stranding and confine it directly under binding screw or nut and automatically insure greatest possible contact. The cushion-like construction when closed permits binding nut or screw to sink into the soft copper and so serve the purpose of a lock nut and is therefore vibration proof. Each is adaptable to a wide range of wire sizes. For standard, extra flexible or solid wire.

SOLDERLESS TERMINALS AND CONNECTORS

MILITARY SPECIFICATION TERMINALS (MIL-T-7928F)

These terminals are produced to military specification. **MIL-T-7928F (ASG)** of the U. S. Army, Air Force, Army Ordnance, Coast Guard, Marine Corps and Navy.

Class 1 and Class 2 are designations for the two classes of Military Approvals. Class 1 Terminals and Splices are those which meet all performance requirements of their Military Standard specification when crimped with Military Specification crimping tools.

Class 2 Terminals and Splices are those which meet all performance characteristics of their Military Standard specification when crimped with the manufacturer's recommended crimping tools.

Type I and Type II designate insulated and non-insulated Terminals and Splices. Type I is un-insulated. Type II is insulated.

SOLDERLESS TERMINALS AND CONNECTORS

HAND RATCHET AND MAINTENANCE TOOLS

RATCHET TOOL

A precision production tool. Lighter in weight and easier to use than any similar tool. Unique pin-action gives greater mechanical advantage. The tool crimps even the heavier wires and terminals (up through #10 AWG) with a light squeeze. Tamper-proof ratchet mechanism is safe for fingers. The ratchet mechanism will not release until the crimping cycle is complete, but no extra effort is required for release and handles then open automatically. Precision-calibrated and crimp-tested at the factory to give perfect electrical connections every time.

MAINTENANCE TOOL

An ideal inexpensive multi-purpose maintenance tool. Handles wire sizes #22 through #10 AWG. Cuts and strips wires, crimps insulated and non-insulated termials and connectors. Proper leverage is provided to assure uniformly reliable results. Edges stay sharp. Quality hardened steel. Insulated handles.

SELECTAKRIMP®

A New Tool for Crimping Both Small and Large Wire Range Terminal in Maintenance and Production Work

OUTSTANDING FEATURES

- Completely portable—easy to use
- Eliminates need for soldering large wires to terminals
- Replaces costly, permanently mounted crimping equipment
- "In-line" action assures uniform crimping
- Impossible to over- or under-crimp
- Low cost—yet lasts indefinitely

*Crimps #16 thru 4/0 wire range terminals

Here's the long-awaited answer to the problem of crimping large wire range terminals in maintenance and production work — without costly, permanently mounted equipment. The new Waldom "Selectakrimp" is a completely portable, easy-to-use tool. To operate, all you need is any conventional 2-lb. hammer to produce the closing pressure by striking the ram. An easy-to-read crimping scale prevents under-crimping. Over-crimping is prevented by unique design of the nest and indenter. Terminal being crimped is held securely in the nest by a strong, completely enclosed spring. Uniform, positive connection crimping is assuerd by the "in-line" ram action.

A single Selectakrimp tool can serve various departments, because its light weight (1¾ pounds) makes it easy to bring the tool to the work. Where production requirements call for simultaneous use in several locations, the low cost of Selectakrimp makes it economically feasible to have more than one in plant or shop.

Built to last indefinitely, the ram is made of specially heat-treated tool steel, and the base, of cast malleable iron. Base design prevents rocking of tool under closing pressures.

Part No. SKT-840 ..... each $15.54

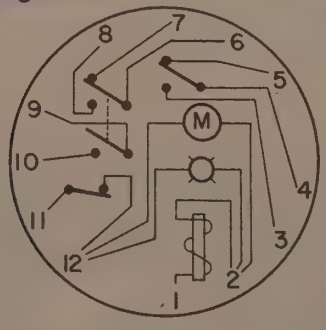
delay/interval timer

automatic reset / plug-in type

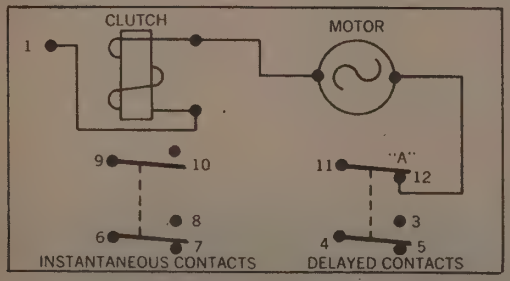
SERIES **GP**

An automatic reset, synchronous motor driven multi-purpose timing control that incorporates two sets of instantaneous contacts and two sets of delayed contacts. In its simplest application the series GP provides an adjustable time delay between the initiation of current to the timer and the subsequent operation of the timers internal load switches.



The timer can perform an interval function starting from a momentary switch closure because it is equipped with additional contacts. In this interval function a load is energized at the beginning of the time cycle and turned off at the end or when the timer reaches "zero."

dial, adjustment



Time settings are made by rotating the knob and black pointer to the desired time setting. In operation a red pointer will move to "ZERO, thereby providing a visual indication of elapsed time. When power is removed from clutch of the timer the RED pointer resets to the position of the BLACK pointer, ready for another operation.

All dials, regardless of time cycle have 60 calibrations through 325° of rotation.

features

plug-in design

The Series GP is designed to be easy to install, and if necessary replac Quick change of time cycle is made simple through the plug-in featur All time cycles are interchangeable, instantly.

high accuracy

The Series GP features a new and unique concept in instrument clutch ing. This feature, called a Spider Clutch incorporates the high accurac of infinite engagement clutches with the mechanical integrity of toothe clutches. The Spider Clutch operates in atmospheres laden with rubbe lubricants without slipping, yet provides repeat accuracy of ±¼ of 1% unattainable with tooth clutches. Reset time is less than ½ second for fu scale.

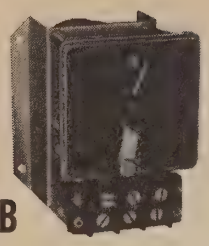
time delay timers



motor driven

Three basic methods are employed to generate a Time Delay: motor driven, thermal bi-metal and electronic. The Series GTD, MTD, CTD, CH, CSF, TDAB, and TDAF generate the Delay function from a motor. This delay is created by applying power to the timer motor/clutch circuit with a sustained switch closure (sustained is interpreted as simply being longer in length than the desired delay). When the timer receives power it begins a delay period, at the end of which occurs a switch operation. The load switch remains in the operated condition until power is removed from the timer, at which time the timer automatically resets. All units feature an external clutch to couple the motor to the timing mechanism during the time cycle.

The Series GTD, MTD, CTD, CH, CSF, TDAB and TDAF feature an external clutch to couple the motor to the timing mechanism during the time cycle. Operating circuit is illustrated below.

WIRING DIAGRAM:

* SERIES TDAB

SERIES TDAF

The Series TDAB is a back mounted delay timer featuring an external clutch, designed for the most demanding and accurate applications. This exclusive clutch enables the timer to be offered in a wide range of time cycles, ranging from 1 second to 3 hours in 12 individual models. The TDAB clutch also features an automatic reset which allows the complete timing/switching movement of the timer to reset in less than 0.2 of a second. Switch rating is 10 amps., SPDT, snap action contacts rated at 115/60 non-inductive.

The TDAB is also available in a steel knockout housing. Please specify if required.

The Series TDAF is a panel mounted, automatic reset timer employing the same rugged movement as the TDAB. It is commonly used in applications requiring high repetitive accuracy, fast reset, and heavy usage.

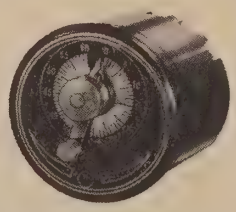
SERIES MTD

The Series MTD Time Delay Timer represents a new appearance concept for timing controls. This new timer is designed to match modern panel instruments, so commonly found on the finest automatic machines. The MTD features a rugged plastic face which protects the setting and progress indicators from dust and damage. When used alone or in conjunction with other instruments, the Series MTD will contribute to equipment appearance as well as performing its control function.



The control function of the Series MTD is one of providing a predetermined timed delay between the closing of one load circuit and the subsequent operation of the timer isolated load switch. The load contacts are 10 amp. SPDT snap action and are brought out to snap on terminals located at the rear of the timer. Mounting is through a 3" round hole in a panel and secured by means of a bracket screwed to the rear of the timer.

interval timers

An interval timer closes its load circuit immediately upon the start of the time period. This circuit is closed (or opened) during the time that the timer is running for the pre-selected period. When this is completed, the load circuit opens and the timer automatically resets. Interval timers are designed to start from a momentary pulse. However, a sustained start circuit can be used. If the start circuit is still closed at the end of the time cycle, the load circuit will return to its normal position, but the timer will not reset until the start circuit is broken. At this time, the reset will occur and the timer is again ready for another cycle.

The Series Dual-Trol is a compact recycling timer that provides two adjustable ON-OFF sequencing switch closures. Electrically, the Dual-Trol continuously closes and opens a SPDT 10 Amp. load switch. The unit consists of 2 TM modules, operating in sequence.

Example: An electric motor is to be life tested by operating it in a ON/OFF sequence of 10 seconds ON, 2 minutes OFF, continuously until failure. This program is controlled by a Dual-Trol equipped with a TM-15S and a TM-3M. The 2 minutes OFF period is controlled by the TM-3M set at 2 minutes, the 10 second ON time is controlled by the TM-15S set at 10 seconds.

Tandem/Type A

The Tandem Re-cycling Timer is a precise timing device that provides 2 adjustable and continuous time cycles. Any combination of 10 interchangeable timing elements are possible; for example: a 3 hour element and a 6 second element can be combined in the control cabinet and adjusted to provide a load circuit with a 1 second pulse every 3 hours. This cycle will continue in sequence until shut down or re-adjusted.

Control Cabinet . . . Incorporates an external "ON", "OFF" toggle switch, load control switch, pilot lamps, male load plugs, input line cord and element enclosures for two individual timing elements. The load circuit is carried by a SPDT relay, contact rating is 15 amps A.C. non-inductive. Control cabinets are available for 115, or 220 volt/60, 50, or 25 cycles. Cabinet dimensions are 9" x 11½" x 6⅛". Shipping weight of control cabinet is 11 lbs. Each ET element weighs 4 lbs.

INDUSTRIAL TIMER CORPORATION

programming cam timers

series RA/RC/CM/MC

motors

Heavy duty synchronous motors, U/L and CSA approved. These motors are available in any of thirteen standard speeds. In cases where short time cycles are required of a higher torque motor is used. On the MC-O and RC-O Multi Cam Timers a High Torque motor is standard. These motors are built and guaranteed for long trouble-free performance.

switches

Single pole double throw snap action, U/L and CSA approved, totally enclosed. The switches are mounted on individual brackets, permitting removal of each switch without disassembling the entire switch bank. The switch contacts are rated at 10 amps non-inductive AC.

electrical characteristics

The Cam Timer Series can be supplied for 115 volt or 220 volt AC operation on 25, 50, 60 or 400 cycle frequencies. (As well as 6, 12, 24, & 30 volts DC)

gear rack assemblies

50 standard ratio gear and rack assemblies are stocked for changing overall time cycles on the Cam Timer Series. These assemblies may be changed by removing a 5/40 screw, setting the rack into the recess, and retightening the screw. Refer to chart for particular time cycle and gear rack assembly.

individual cam adjustment (series CM, MC, RC only)

Standard cam construction is such that the ON or OFF periods may be adjusted from 2% to 98% of the total time cycle. Cam adjustment consists of loosening the nut on the face of the plate, rotating the movable cam segment to the percentage of ON or OFF period desired, and then tightening the nut. The cams are made of corrosion resistant aluminum.

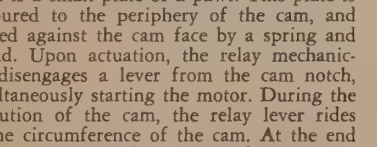
timing sequence (MC, RC only)

Each cam is individually mounted on the shaft by means of a heavy duty friction disc which allows easy finger adjustment of timing sequences. Individual positioning of the cam is also made possible without the use of set screws and wrenches, and permits rapid adjustment. On the Series MC and RC Multi Cam models a drum calibrated from 0% to 100% is mounted on each cam, this drum in conjunction with a mounted pointer acts as a guide when setting related programmed sequences; thus providing a reference point for use during the cycle.

ordering information

When ordering a Cam Timer please specify the following information:

1. Voltage and frequency of motor current.
2. Number of switches desired.
3. Time cycle selected from chart. (refer to motor number plus gear rack number. Example: MC4 Timer with C-12 Gear Rack.)

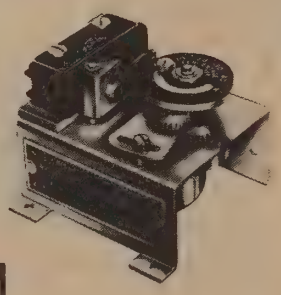


* SERIES **RA**

single cycle timer

The Series RA Timer is designed to provide a single timed electrical cycle upon momentary actuation from a remote position. The cam is a circular plate notched at one point in its circumference. Coincident with this notch is a small plate or a pawl. This plate is contoured to the periphery of the cam, and pressed against the cam face by a spring and a stud. Upon actuation, the relay mechanically disengages a lever from the cam notch, simultaneously starting the motor. During the revolution of the cam, the relay lever rides on the circumference of the cam. At the end of the revolution, the pawl guides the lever into the notch, stopping the motor after completing one revolution. The single switch handles the timer motor and the external load circuits, limited only by switch rating.

$30.50 — 115/60



* SERIES **RC**

single cycle multi-cam timer

The RC Multi Cam Timer is identical to the RA, but operates from 1 to 20 additional circuits. This design enables the user to have all the advantages of the Series MC, plus the single cycle homing control of the RA.

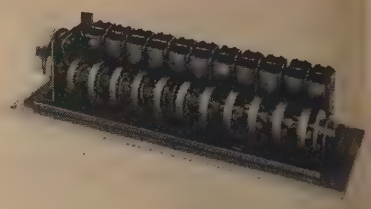
recycling timer



* SERIES **CM**

The Series CM Timer repeats a continuous, adjustable ON and OFF electrical cycle. This timer consists of a heavy duty synchronous motor, adjustable cam, and single pole, double throw snap action switch, assembled on a base mount chasis. The cam is coupled to the motor by means of a simple gear and rack assembly, which can be changed by the user. Standard cam construction is such that the ON-OFF cycle may be adjusted from 2% to 98% of the total time cycle. The cam is calibrated in percentage for quick accurate adjustment. 50 stocked gear and rack assemblies are available for time cycles from 40 cycles (2/3 of a second) to 1 rev. in 72 hours.

$20.50 — 115/60

multi-cam recycling timer

* SERIES **MC**

The MC Multi Cam Timer is identical in op eration to the CM timer but controls from 2 to 20 circuits. The cams are mounted on a single driving shaft, coupled to the motor by a gear and rack assembly. Each cam is inde pendently adjustable for 2% to 98% of the total time cycle. Individual cam adjustability enables the timer to be used as a programming device. The cams can be adjusted in any com bination of timed sequences rapidly and easily Total revolution time is determined by motor speed and the interchangeable gear and rack assembly.

. ORDERING INFORMATION—Model number selected from top of gear rack chart, gear rack, number of load switches, voltage and frequency.

ALTERNATE ORDERING INFORMATION—Required time cycle (one complete rotation of cam shaft), number of load switches, voltage and frequency. Since some time cycles are available in 3 model numbers, the use of the ALTERNATIVE ordering information may expedite delivery by allowing us to ship model in stock with required time cycle.

. Multi-switch cam timers requiring time cycles in shaded area may require high torque timing motor. This is due to increased torque encountered in rapid time cycles. To determine need of larger motor; multiply required time cycle in seconds by 2/3, the answer will be the maximum number of switches that can be operated with a standard timing motor. EXAMPLE: Time cycle 15 seconds. 2/3 x 15s=10. 10 switches can be operated at 15 seconds with a standard timing motor, more than 10 load switches requires the use of a high torque timing motor.

Price added for Hi-Torque motors:

#0	1 RPS	$35.50	$60.00
#1	⅙ RPS	$37.50	$60.00

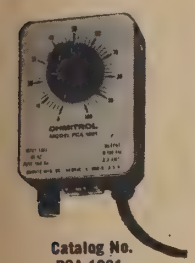
Now, for the first time, a Solid State Power Control is available which is adaptable to a wide variety of applications by a simple turn of a screwdriver!

An internal trimmer allows the starting point of the control voltage of the Ohmitrol to be set anywhere within the stated trimmer voltage range. (This adjustment can be preset at the factory at small additional cost).



From the starting point to full line voltage, infinitely smooth control is obtained by means of the control knob. An "on-off" line switch actuated at the counterclockwise end of the control knob rotator is provided on all models.

Ohmite solid state power controls are the smallest 1 or 2 KW controls available and offer the advantages not only of convenient size, but also of power savings, long life and low initial cost.

Two styles are available: the component style for panel mounting in equipment, and the lightweight, self-contained portable style. Portable units are completely self contained with grounded line cord and standard grounded AC receptacle.

Ohmitrol Controls are available with AC output and with two kinds of DC output delivered simultaneously. One kind consists of rectified DC, at approximately full line voltage; the other is the variable or controlled DC. This double output is useful, for example, for controlling shunt wound motors. Two-way terminals at the rear of the controls accept quick-connectors (push-on connectors), or can be soldered.

ALUMINUM INSTRUMENT KNOBS

STANDARD SERIES

K" Series knobs are a completely matched family in four basic diameters to enhance equipment appearance. Each knob is machined from one-piece aluminum and then anodized in either natural, black or gold. ALCO's 1¼" dia. K-1250-S Spinner Knobs are part of this "K" Series family and have the addition of a knurled handle. The K-5700 matched knobs for concentric shaft controls consist of two separate knobs: an upper knob for the inner control shaft (⅛" dia.), and lower knob for the outer control shaft (¼" dia.)

SKIRTED ANODIZED KNOBS FOR ¼" SHAFTS

The "KS" and "KSP" Skirted Series offer an excellent matching knob group to the ALCO "K" Series described above. You may choose between a solid aluminum skirt (KS Series), or the clear acrylic plastic skirt (KSP Series). The "KS" Series is available in three body sizes, and the "KSP" Series is available in two sizes. These knobs have exceptional styling for the modern space-age technology, yet are reasonably priced for production use. The color grouping includes natural aluminum, and black anodizing.

KNURLED ALUMINUM KNOBS

DIAMOND KNURL SERIES

The conical top of this series adds a new dimension to knob styling. The nonslipping diamond knurl knobs feature precision machining, unbreakable strength, and uncompromizing anodized colors of natural, black or gold finish with hairline indicators. This fine diamond knurl knob combines the rich, anodized look in a metal knob, yet with all these quality features the ALCO "KD" Series costs far less than you would expect to pay. The diamond knurl family is available in four sizes.

STRAIGHT KNURL SERIES

ALCO's new "KN" Series of straight knurl knobs with hairline indicators includes the lustrous solid anodized color types and the decorative two-tone models. The straight knurl knobs have clean, precision serrations of the highest quality. The anodized two-tone knob is available in two variations: (AB) natural aluminum body with black top, or (BA) black anodized body with natural top. For the first time ALCO is proud to offer a mating one-piece aluminum pointer knob (KPN-700) — thus complementing this series.

ALUMINUM INSTRUMENT KNOBS

MINIATURE SERIES

With the development of solid state circuitry and the "squeeze" on the instrument panel, ALCO has created a mating series for miniature switches and controls having a ⅛" diameter shaft. The "KC" Series is designed for the MRA Series Alcoswitch, but usable with other components. "KCVS" Knobs provide the need for setting a predetermined stop position on controls or rotary switches with a ⅛" shaft. KC-500-10 has engraved numerals 0 through 9. KR-1 Knob Reducing Adapter can convert any knob having a ¼" shaft hole to fit a ⅛" size shaft.

DELUXE SERIES

These deluxe knobs are functionally styled to enhance the appearance and improve the operation of quality equipment. The unique, saw-cut indicator brings about the mod-trend in a complete family of knobs in four body sizes for use with ¼" shafts only; single set screws. More than any other component on your instrument panel, control knobs are in constant contact with the user. Customers first touch, twist, and use knobs (and are often influenced by this reaction) when purchasing hi-fi/stereo, tape recorder, test, lab and medical equipment. Model KHF-1250 is supplied with 2 set screws, and has 120° spacing.

PILOT LIGHT ASSEMBLIES

BNE Series — featuring a 1-piece body construction, this miniature neon pilot is ideally suited to indicate toggle switch positions, or for other display configurations with space limitations. A particular characteristic of this model is the compact lens system protruding slightly above the panel. Operating voltage, 75 VAC without resistor; for 115 VAC operations use external resistors (150K for standard intensity, 33K for high intensity) not supplied. Single ⅝-32 mounting.

BNF Series — similar to the BNE Series except that the lens system extends a greater distance beyond the panel for a bright illumination. This model has a permanent built-in neon and operates on 75 VAC. An external resistor required for 115 VAC. Turret type lugs are used for simplified hookup. Single ⅝-32 mounting.

BND Series — combines an entirely new look in a space-saving pilot assembly. The neon protrudes beyond the panel to provide maximum light intensity. This model is available with or without built-in series resistor for 75 VAC or 115 VAC operation, and is also available as standard or high intensity. Single ⅜-32 mounting.

General purpose panel indicators have more versatility than similar models. 8 Lens Styles: Allow a greater variety to choose from (see below). **NE2H High Intensity Lamp** is incorporated and contains built-in series resistors for 110V operation. Flexible 6" leads, tinned conductors, high temperature insulation 105°C. Black wire size: solid 22 AWG. Polypropylene indicator housing (white) with acrylic lens — available in Red, Amber, and Clear — specify. Mounts ¾" dia. hole.

RETAINER — use of the mounting retainer supplied with each BIM indicator allows the installer to have 2 methods of panel installation. One choice is the conventional way where the retainer is pushed against the back of the panel and the indicator is placed through it. An optional choice of mounting is to fit the retainer on the front side of the panel, in a 1½" dia. hole.

BIM-R Metal Retainer (available separately) provides a snug-fit in a minimum of space. Used only with BIM Series having a ¾" hole mounting. Packaged, sold in multiples of 25.

(A) MS-4000B—7-segment incandescent readout has a bright display that is clearly read under all ambient lighting conditions. The flat, single-plane display allows a wide-angle viewing without distortion. Large character size (.325″ x .600″) relative to case size (.552″ x 1.18″). Makes use of high temperature material housed in a one-piece, black matte metal case. Terminal pins are nickel-plated brass. Lamps are closely fitted into a compartmented block with short leads virtually eliminating vibration problems. Vibration test: 2000 c/s. Lamps are separately lit to form any numeral as desired by use of an external decoder/driver. High reliability, long life #683 T-1 subminiature lamps have a life expectancy of 100,000 hours.

MS-4100—as above, but with decimal and a slightly smaller figure. External dimensions same as above.

(B) MS4100S—symbol indicator with +, −, 1, and decimal, to match either the MS-4000 or MS-4100 readout.

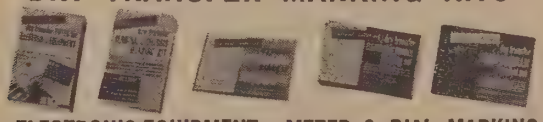
THE REVOLUTIONARY METHOD FOR MARKING ELECTRONIC EQUIPMENT

JUST RUB and it's PRINTED!

Sharp • Clean • Fast

Not a Decal



No Water • No Tapes

INSTANT LETTERING® marking kits bring you all the necessary elements for completely marking electronic equipment, prototypes, drawings, etc. in this fast new easy-to-use form. There's even a new drafting symbol kit for better more readable schematics.

Words, letters, numerals, switch patterns, arcs, drafting symbols, etc. are printed on a special transparent carrier film. Rubbing over one of these elements with a ballpoint pen releases it from the carrier film and adheres it to your working surface.

INSTANT LETTERING® words and symbols transfer to almost any surface including glass, plastic, even painted and bare metals. Now you can quickly mark all panels, even especially calibrated two-color nomenclatures, pilot light jewels, sub-assemblies, circuit boards, etc. Reproduction quality **INSTANT LETTERING®** transfers are clean and sharp, leave no background haze or film, make prototypes look like finished production equipment and give all equipment and drawings a professional look.

Two Terminals — Fully Insulated

Meet or exceed environmental and operational requirements of MIL-L-6723 and MIL-L-3661.

RUGGED CONSTRUCTION

Lamp, socket, and all connections are completely insulated from the bushing and panel to which it is attached. The use of phenolic material for military specification grade assures permanent isolation from ground. These assemblies are solidly made to withstand usual vibration and corrosion resistance tests.

Order Complete with Lamp. Specify Lamp Number.

WATER-TIGHT ASSEMBLIES

Water-tight construction: These Sub-Miniature Lights are completely water-tight on the face of the panel. Water-tightness is achieved by means of **retained O-ring seals.** One **O-ring** is retained within the back of the lens cap, the other behind the flange on the mounting bushing.

WATER-TIGHT DIMMERS

On the Dimmer type assembly, a third **O-ring** is mounted within the dimmer cap — so positioned as to assure absolutely no leakage through the dimmer slot. For data, request Catalog L-178.

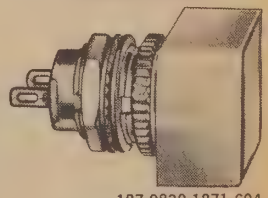
The lens cap is effectively lighted by T-1¾ bulb with midget flanged base, which extends completely into the luminous portion. Fine solid color effects are obtained. The two-part construction permits opaque sides with lighted colored faces.



Lens caps may be rotated, permitting legends or cap edges to be easily brought into alignment after installation of the assembly; or they may be keyed, thus permitting them to be pushed into place only in a **predetermined** position.

Unique anti-rotation (locked) construction provides for secure keyed mounting of mounting bushing on panels.

LENS FACE COLOR: See listing — LENS COLOR — above. See lamp listing and range of voltages above.

To obtain ½" caps with non-rotatable feature, change catalog number prefix from: 183 to **186**; 185 to **184**; ¾" caps with rotatable feature: 188 to **191**; 187 to **190**.

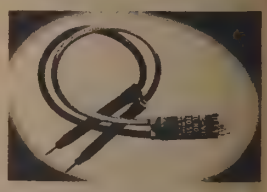
voltage testers

Rugged, long-lasting. Completely eliminates conventional (and delicate meter movements — test lamps ruggedized for toolbox use.

MINI-VOLT VOLTMETER Model # B400B

"Abuseproof" voltmeter, sufficiently accurate to indicate a 2 or 3 volt drop on 110 volt line.



(U.S. Pat. 2,644,134)

In addition to measuring the exact voltage over the range from 65 to 660 volts, Model #400B is used to identify AC or DC lines, check rectifiers, filter capacitors, chokes; test for blown fuses, grounded components, DC polarity, measure voltage drops with load, and 1001 other uses.

For use on AC (any frequency) or DC, MINI-VOLT, with an impedance of approximately ½ megohm, draws negligible current and can therefore provide dependable voltage readings even on circuits used in electronic apparatus.

Provides lifetime of service — glow lamp is guaranteed for 25,000 hours of actual operation. Furnished complete with extra-heavy insulated 12-inch flexible test leads and test prods.

LINE-VOLT TEST LITE Model #B1310

LINE-VOLT Model No. 1310 is a rugged, compact test light covering the wide range of 55-550 VAC or 90-600 VDC.

LINE-VOLT tells immediately whether there is power in the line, checks fuses, can identify AC or DC lines, grounded components, continuity of line circuits.

Leads are 8" long overall and are heavy-duty flexible wire terminating in 3½" insulated prods with really sharp points — able to pierce insulation, paint, or oxidation. Bright lamp provides immediate positive indication.

LO-VOLT TEST LITE Model #B1300

LO-VOLT Test Lite No. 1300 is a compact test light for ready use in many applications.

Operating over a wide range of 3-28 volts AC or DC, LO-VOLT supplies the instant answer to whether there is an available power supply for thermostatic controls, model train equipment, other stepped-down AC voltages as well as battery supplies such as automotive.

LO-VOLT is supplied with flexible leads terminating spring clips

PLANETARY DRIVES

599

6665

Two ball-type planetary drive units are useful whenever a compact device i needed for reduced-speed operation of light mechanisms. These units depend o the action of steel balls that rotate between the knob shaft and a concentri sleeve that is attached to the driven instrument. The units are adjustable so tha the pressure on the balls can be varied to match the operating load, this assure maximum smoothness while maintaining adequate torque. Maximum torque is 1 inch ounces; minimum torque is 10 inch ounces. The ratio is approximately 5 to 1 and two units may be used in tandem to produce a 25 to 1 ratio. These are prec sion devices for both military and commercial applications.

TWO-SPEED PLANETARY DRIVE

Permits slow speed operation at approximately 5 to 1; high speed at 1 to 1. The 6665 Dual Concentric Knob below fits this unit. Complete with mounting accessories.

LOW FREQUENCY FILTER (BAND PASS & BAND REJECT)

The **LBP-10** Low Frequency Band Pass Filter has a 10 Hz center frequency. The filter has 4 terminals so that it can be used as a band pass filter with a 10K ohm load or with a high impedance load, and in addition as a band reject filter As a Band Pass Filter, the unit is within 3 db at 9.6 and 10.4 Hz. Attenuation a 5 & 20 Hz is at least 30 db with the 10K ohms output load and 35 db with the 3.3 Megohm load. As a Band Reject Filter, the unit attenuates 10 Hz by minimum of 30 db and varies less than 3 db from DC to 7 Hz, and from 14 H to 36 kHz. This filter is MIL type FR6RX22FB1.

For size and weight, see FB, UTC Page T-12 Section 5600.

HIGH Q PRECISION INDUCTANCE DECADE

Invaluable instruments for design and experimental work with tuned circuits, wave filters, and equalizers. The low hum pickup toroid coils employ a new permalloy dust core which, combined with special winding methods, provides very high Q, excellent voltage and temperature stability, and high self resonance frequency. The inductance values are laboratory adjusted to better than 1% precision, with calibration noted on base. Not to Mil specs.

BML band pass filters, similarly, work into a grid, but have an input impedance of 500/600 ohms. They provide a gain of 9.
HMI filters are high pass interstage units.
LMI filters are low pass interstage units.
HML filters are high pass with input and output impedance of 500/600 ohms.
LML filters are low pass filters with input and output impedance of 500/600 ohms.

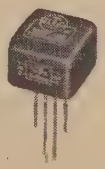
MINIFILTERS*



These units provide almost the same characteristics as the standard interstage units listed to the left, although extremely miniaturized. Hermetically sealed to MIL-F-18327C specs. B type case: 3/4" x 3/4" x 1 1/8" h.; wt., 1 oz. H and L cases: 1" x 1" x 1 3/8" h.; wt., 2 1/4 oz. Cutoff frequencies in Hz indicated by type number.
BPM units (BAND PASS) have 2:1 gain. Attenuation is approximately 2 db ±3% from center frequency, and 35 db per octave as shown. Input 10,000 ohms, output to grid, tapped for 10,000 ohms to provide for transistor circuits. For tube circuits continuity is on grid side, for transistor use continuity is on input side.
BPH units (BAND PASS) attenuation less than 3 db ±5% from center frequency, and 40 db per octave. Source and load 500 ohms.
HPM units (HIGH PASS) are down less than 6 db at cutoff frequency, and more than 30 db at .67 cutoff frequency, 40 db at .6 cutoff frequency. Input and output 10,000 ohms.
LPM units (LOW PASS) are down less than 6 db at cutoff frequency, and more than 30 db at 1.5 cutoff frequency, 40 db at 1.65 cutoff frequency. Input and output 10,000 ohms.

Fast, accurate point to point circuit testing

PARAGON PRO-GLO Circuit Testers are simple, inexpensive, easy-to-use instruments for checking non-energized circuits. This little pen-size unit accurately checks for polarity, shorts and opens and continuity in circuits with resistance up to 10 ohms.

The PARAGON PRO-GLO tester consists simply of a plastic case containing two AA penlight batteries and a #222 lamp, a pointed probe and a three-ft. lead wire with alligator. The lead wire holds a new probe protector.

Servicemen and home repairmen appreciate the ease of use of this simple tester. Signal light at point of contact eliminates necessity for shifting eyes to read meter. Speed and accuracy of testing is increased. Low cost of device makes it practical for mass distribution in large service centers. Long operating life is assured — probe and battery contact spring are tin-plated beryllium copper, case is high-impact plastic and wire is heavy-duty, flexible test lead.

Probe-Protector Included

New! Vinyl extrusion Probe - Protector glides easily on the cord—can't be mislaid. Slips over Probe when circuit tester is not being used. This prevents accidental contact with metal that could create a circuit thus minimizing unnecessary battery burn-out.

Tracks 'em Down Dead or Alive

ONLY THE VERSATILE DESCO* Circuitracer*

MODEL CT1-1
Weighs only 2½ ozs. LIST $5.95

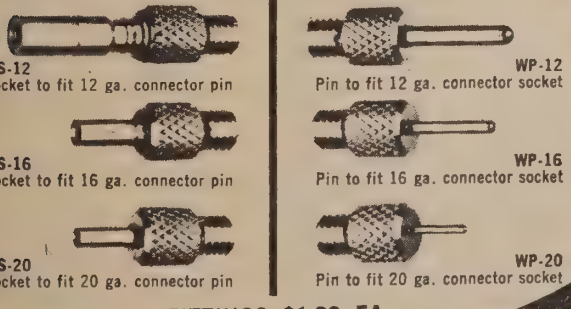
GIVES YOU A 3-IN-1 ELECTRICAL TEST LABORATORY

Satisfaction Unconditionally Guaranteed

DON'T SEND A MAN TO DO A BOY'S JOB!

Are the technicians in your laboratories and shops using expensive meters and instruments for sample continuity and voltage checks? Speed up production through the use of the tool specifically designed for this application. A meter should be used only when the value of voltage, resistance or current must be known. Under any other conditions a Circuitracer will provide the required information faster and easier than expensive, bulky meters.

CIRCUIT TESTING WITH A CIRCUITRACER IS FASTER because the signal light is in the tip at the point of contact. This makes it possible to determine the existence of a circuit or voltage without removing the eyes from the test point to read a meter.



SAVE METER REPAIR MONEY BY USING DESCO CIRCUITRACERS. An overvoltage across a meter usually results in extensive damage which takes the meter out of service until repaired or replaced. The worst that can happen to your Circuitracer is a burned out lamp that can be replaced by the operator in less than a minute. Total cost, ten or fifteen cents for the lamp!

*T.M. Reg.

The CIRCUITRACER is the only electrical tester (other than expensive meters) that can test dead circuits, low voltage live circuits AND high voltage live circuits. It is made of the finest materials available and is designed for long life.

INSURE CONNECTOR RELIABILITY

Manual probing of harness connectors while circuit testing can damage connectors and impair reliability. Desco Test Probe Adapters were developed to provide a test fitting identical to the pins and sockets in "AN" connectors being tested. They make the same electrical and mechanical contact as the mating connector, and insure against scratching, bending and warping.

The adapters are made in three sizes to fit connectors using #12, #16 and #20 wire gauges. The sockets are gold plated copper with a brass sheath which retains a beryllium copper spring. The pins are stainless steel to insure long life. All are made to rigid MIL-SPECS. The adapters will fit Desco Jumper Wires and the Desco Circuitracer* Tester interchangeably.

THE ULTRA LOW CURRENT Trantracer*

A SAFE, FAST, INEXPENSIVE "GO" – "NO GO" TESTER OF ULTRA LOW CURRENT SENSITIVE CIRCUITS

MODEL TR200 LIST $12.75

The Trantracer* checks continuity by sending less than 50 micro amperes through the circuits to prevent damage to solid state junctions and micro watt sensitive elements. Continuity is established as Go — No Go through circuit resistances of up to 400,000 ohms.

Maximum voltage applied to very high resistance circuits is 2 volts, low resistance circuits normally see millivolts and micro amperes.

PANEL METERS

BIG LOOK¶

Handsome, easy-to-read meters in two styles for all panel and control applications. All DC meters have self-shielded movement with pivot and jewel or taut-band suspension. Taut-band designs give great resistance to shock and increased sensitivity. Zener-diode, expanded-scale voltmeters available for improved narrow-range accuracy on 3½" and 4½" sizes. Snap-on, snap-off covers on meters. All types meet ASA Specification C-39.1.

Accuracy: ±2% FS, all DC and AC iron vane; ±3% FS, AC rectifier type (with 60-cycle sine wave at 25° C); ±0.5% of midspan, expanded-scale types. **Overload:** 20% momentary and sustained, voltmeters; 10 times rated current for 10 consecutive intervals of ½-sec. with 1-min. interval between successive applications, momentary; 20% for 8 hours, sustained, ammeters. **Scale:** Pivot and jewel, 90° rotation; taut-band, 100°.

Insulation: 2600 V rms hi-pot for all but 1½" models (1600 V rms). **Response Time:** Meet or exceed ASA requirements: 3 sec. max. for microammeters; 2 sec. max. all other DC ratings; 2.5 sec. max. AC ratings. **Damping:** 40% max. overshoot; 2.5 min. damping factor. **Burden:** 5 amps, 0.5 VA, 0.5 power factor for AC ammeter; unity power factor, AC voltmeter.

HORIZON LINE¶

BIG LOOK PANEL METERS

Accurate, qick reading with wide, border-to-border scales; free from shadows. Most popular meter design with low-profile, easy-to-read sense. Aluminum frame holds reflections to a minimum. Big, bold numerals over cleanly marked divisions for fast reading. Tapered pointers assure high accuracy. Taut-band suspension provided on all models except 1½" size. Standard 2½" and 3½" models come with sealed cases to protect against hair, dust, chemicals or other foreign particles. Shelf-shielded DC mechanisms; snap-on, snap-off covers.

HORIZON LINE PANEL METERS

Distinctive, low profile design for sophisticated styling. Best readabili with swept-back windows to deflect light from line of sight. Both 3½" an 4½" meters may be mounted semi-flush or back-of-panel, recessed wi face silhouetted by half-bezel frame to conserve space and improv readability. DC types have core-magnet d'Arsonval movement with piv and jewel, or taut-band suspensions; self-shielded for use on any pane Zener-diode, expanded-scale voltmeters available. Snap-on, snap-off cove supplied on 4½" size.

METER RELAYS

TYPE 195 AND 196 METER RELAYS

TYPE 195

New General Electric Meter Relays feature a **solid-state, light-sensitive switch** for optimum control simplicity and reliability. This switch controls the load relay directly; no amplifiers, no pointer contacts . . . no mechanical interference with meter movement. Pointer travel is unrestricted across the entire scale . . . you get **continuous indication** above and below the setpoints! Control action is dependable and repeatable over entire range!

Unique **piggy-back control modules** on 3½-inch and 4½-inch models, eliminate mounting and wiring of separate components . . . speed up and simplify installation. Control mounts directly on rear of indicator; no soldering, no complicated connections . . . just plug-in and they're mated! Control module may be removed without interrupting measurement circuit.

Other features include **ON-OFF** (automatic reset) **or Alarm** (manual reset) **Control . . . 120-volt A-C Operation!** No special power supply needed . . . **Long Lamp Life!** Conservatively estimated at 5 years . . . **Fail-safe Operation.**

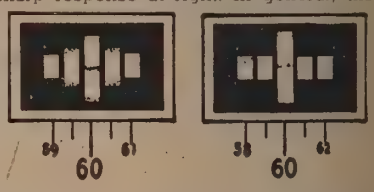
J-B-T®

32nd Year

VIBRATING REED FREQUENCY METERS

J-B-T INSTRUMENTS, INC.



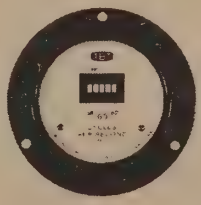
MODEL 34-FX-ser. A, a popular 9 reed meter, shown half actual size.

• **USES, Commercial and Military** — J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, television, and radar service, on engine-generator sets and standby equipment, in laboratories, in many types of aviation and electronic equipment, on panel and control boards, in inspection setups, and in high-cycle power sources — wherever constant or known frequency is important to accurate and efficient operation of equipment. Superior performance for commercial and military applications is assured by more than 30 years of continuous experience and know-how covering the design and complete manufacturing of hundreds of thousands of these instruments in our Connecticut plant. Current production incorporates several innovations covered by recent J-B-T patents.

• **ADVANTAGES** — At reference temperature of 77°F most models have guaranteed accuracy of 0.3% or better of the frequency being measured, but the tables that follow indicate that certain models may be ordered with accuracy of ±0.1%. Accuracy on interrupted DC may be somewhat less. High fatigue strength provides a safety factor for continuous operation. Temperature compensations are not required as frequency change per °F is only .0075%, negative. For example, a 50°F temperature rise causes a 60 cps reed to read only 0.2 cps lower than at reference temperature.

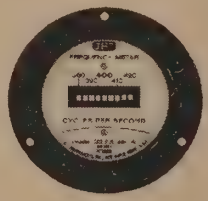
• **OPERATING PRINCIPLE** — The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. Each reed is adjusted to respond by resonance to the frequency shown on the dial. As the current excites the driving coil, the reed "in tune" with the frequency in the coil will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. To determine frequency, simply read the reed.

• **RESPONSE PATTERNS** — Breadth of actuation differs with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right. In general, the lower the frequency the greater the amplitude, the higher the frequency the less the amplitude. Thus a 25 cycle reed normally will have substantially greater amplitude than a 400 cycle or a 1000 cycle reed.

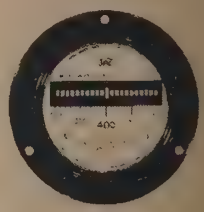


• **STABILITY** — All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Wave form or external fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.

• **TRUST THE METER** — If a meter plugged in on a 60-cycle AC power line does not indicate exactly 60 cycles, trust the meter. Power supply may momentarily be off-frequency due to changing load conditions. All J-B-T Frequency Meters are meticulously calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standards frequency signals.



MODEL 21-FX, 5 reeds, matches other 2½" panel instruments.



MODEL 31-FX, 5 reeds, standard. For appearance when operating, see "RESPONSE PATTERNS," above.

MODEL 30-FX, 5 reeds in each of two frequency ranges.

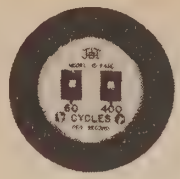
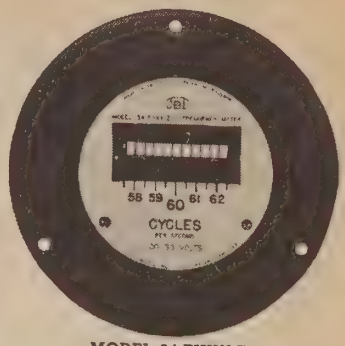
VIBRATING REED FREQUENCY METERS



J-B-T INSTRUMENTS, INC.

J-B-T 32nd Year

SEALED FREQUENCY METERS



FHXX TYPE Sealed meters, glass-to-metal construction, with solder terminals and detachable flange, supersede the former FHX sealed meters. While JAN-I-6, MIL-M-6B, and MIL-M-10304B (Type MR36) do not refer specifically to frequency indicators, the FHXX series uses the front mounting dimensions of these specifications, and meets or exceeds the sealing requirements, and for 3½" meters, electrical requirements, including 3000 volt breakdown. (1½" and 2½" meters meet 1000 volt breakdown.‡‡) Electrical characteristics and accuracy are the same as for corresponding F models without the HXX designation. Sampling procedure includes a test in water where the absolute pressure of the air above the water is reduced to 2.5 inches of mercury (approx. 57,000 ft. altitude) and is maintained for one minute. Available in 3½", 2½" and 1½" cases. For dimensions, see Table, Lines 1, 3 and 8. Standard voltage is 100-130.

MODEL 15-FHAC, 1½"; widely used as frequency standard for cathode follower circuit.

MODEL 21-FHXX, 2½"; 5 reeds, cased to match other 2½" panel meters.

MODEL 34-FHXX-Z-11, shown half size. Accuracy, ±0.2%

REVISED DIAL APPEARANCE

Shipments during the life of this catalog may include meters with dials somewhat different from those pictured here. Dials are being steadily modified to use the revised trademark as adopted during J-B-T's Silver Anniversary Year. Many 3½" frequency meters also are carrying the designation Series A after the model number (as in the 34-FX-ser. A on preceding page). Such instruments have additional ruggedness and sensitivity, and unusually uniform amplitude over the entire span of the meter. However Series A are otherwise interchangeable as to mounting dimensions and circuit characteristics with other meters bearing the same model number.

FG SERIES for Modern Design; Picture Window Frame Optional

FG FREQUENCY METERS. The sparkling clear-plastic front and bright textured metal insert below the dial add zest to any panel. FG meters not only match the 3½" wide x 3" high front of the New EG elapsed time meters on the next page, but are interchangeable as to mounting with Triplett and other brands of panel meters. Standard voltage is 100-130 volts; accuracy and electrical characteristics equal corresponding FX frequency meters in the table on preceding page. For example, Model 30-FG differs from Model 30-FX only in the case. FG mounting details appear in line 9 of the Table of Dimensions below and in Prints SK-160 and SK-164. For picture window mounting diagram, use the half-bezel adapter sketched on the next page. Listed below are typical 3½" FG models and others are cataloged in Bulletin G-109. Groupings of 5 to 21 reeds and voltages of 28 to 230 are available on order. Inquiries are invited on a 2½" FG series.

NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made for the purpose of using at two or more voltages, not additional phases.

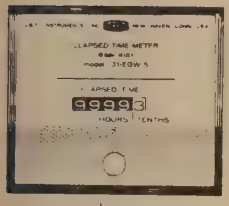
ELAPSED TIME & FREQUENCY TIME METERS

J-B-T INSTRUMENTS, INC.



J-B-T

32nd Year

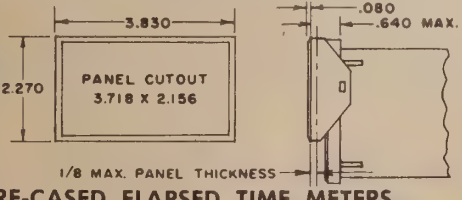
• USES AND ADVANTAGES OF ELAPSED (OR RUNNING) TIME METERS

To record operating time of AC electrical and electronic equipment, these self-starting synchronous instruments normally register in 1/10th hour steps to 9,999.9 or 99,999.9 hours, then automatically reset. They are widely used for tube life, TV equipment, punch presses, conveyors, oil burners, ground support equipment, maintenance schedules, etc. J-B-T engineers recommend the AC type of elapsed time meter for superior accuracy, especially where voltage or ambient temperature vary widely.

New EG SERIES for High Visibility; Modern Picture Window Optional

MODEL 31-EGW-5 for standard flush type mounting.

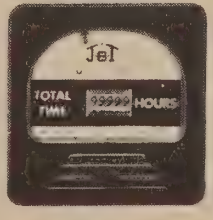
Same model with 13A-239 metal half-bezel.



EG ELAPSED TIME METERS. These are designed to give a bright, jewel-like look to panels when used alone, in multiples, or in conjunction with other instruments such as the matching new FG series of frequency meters. A gleaming textured metal shroud below the dial and a clear-plastic case front 3½" wide x 3" high give high visibility to the numeral read out. Dimensions are same as line 9 for FG meters on opposite page. For optional picture window frame effect, on panel area 3.83" wide x 2.27" high, add preferred 13A-239 metal, or 13A-234 molded half-bezel adapter. (See panel cut-out and mounting detail drawing below.) The quiet, sturdy motors and extensively field-tested mechanisms of other J-B-T elapsed time meters are used in the EG series. Two models are catalogued. Other voltages, frequencies, numerals and 2½" EG Series will be quoted.

31-EGW-5, (illus. at top) 5 wide digits, 0-9,999.9 hours, 60 cps, 110-125 volts .. **$22.60**

31-EGW 6 wide digits, 0-99,-999.9 hours, 60 cps, 110-125 volts **$23.10**



13A-239 and 13A-234 half-bezel adapters, see opposite page.

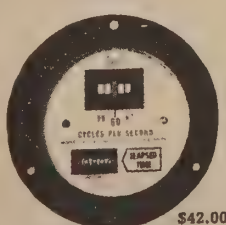
3" SQUARE-CASED ELAPSED TIME METERS

MODEL 31-ES. The square black molded case matches the appearance of other 3"x3" panel meters including **FS** series of frequency meters described on the preceding page. Unlike line 10 of the table shown there, depth behind panel (b) is 2$^{3}/_{32}$", and terminals are located on horizontal center line, each spaced ½" from center (G). Variations can be made for 99,999 hours (suffix U), 230 volts, matte finish or 50 cycles. Now supplied with tenths in red on white, and units in white on black.



31-ES, 60 cy., 110-125 volts, 0-9,999.9 hours **$19.75**

CLEAR PLASTIC ELAPSED TIME METERS

EPL TYPE. See Print SK-102 (C) for 2½" rectangular Model 21-EPL and SK-108 (C) for 3½" rectangular Model 31-EPL. Both types are made to order. The EG Series above is recommended for new designs.

ELAPSED TIME — FREQUENCY METERS

31-FE SERIES. Conserves panel space and centralizes information by combining elapsed time meter with frequency reeds. A separate exciting coil for the reeds achieves close control of reed amplitude and frequency. Reads 0-9,999.9 hours and 58-62 cy. with 5 reeds, at 100-130 volts; self starting. Tenths, red on white; other numerals, white on black. Black metal case with front mounting per Table of Dimensions, line 6. Power consumption, 4.7 watts. TEMPERATURE TESTERS AND ACCESSORIES

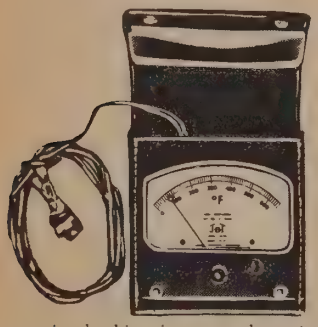
J-B-T INSTRUMENTS, INC.

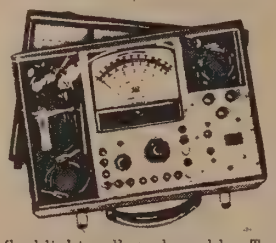
FOR APPLIANCE SERVICING, QUALITY INSPECTION, AND LABORATORY SET-UPS



OVEN OR HEAT CHAMBER TESTERS

MODEL 23-JP-1. This new edition of a long-time favorite portable indicating pyrometer saves time and furnishes reliable information in temperature testing. For instance, when servicing and setting thermostats, the 23-JP-1 continuously reads appliance temperatures as they change. The 0-650°F. dial, with 2.48" scale arc has 10° divisions, readable to 3°. The pocket-sized, scuff-resistant, black vinyl carrying case measures 4½"x2⅞"x4¼". Characteristic of more expensive pyrometers, this model is automatically compensated for ambient temperature. Thus, the Tester eliminates calculations, avoids likelihood of serious error, as temperature changes inside the instrument itself, and gives reliable direct readings. Supplied with attached SA-116, 5½' calibrated thermocouple, clip, and convection shield **$33.00**

MODEL 32-JP-3. This time-tested model has an instrument-type carrying case of natural finished mahogany 6⅛" x 3⅞" x 4½" over hardware. The glass-covered indicator shows 0-650°F. range in 10° divisions readable to 2½° on a 2⅜" scale arc. Exceptionally fast, continuous response. Automatic compensation for ambient temperature is a valuable feature whether the tester is used for service work, sales demonstrations, or inspection. Attached SA-116, 5½' thermocouple, clip for affixing to grill and convection shield included **$36.00**



MODEL 32-JP-7. This model is recommended as the most versatile and easiest to read of this J-B-T series. The 0-650°F. scale is more than 4" long. Automatic compensation for ambient temperature is included, so that temperatures are read directly and without calculations. The 32-JP-7 also provides color-coded external binding posts. These permit quick attachment or interchanging of various J-B-T thermocouples placed in one or more of the heat zones to be checked. An SA-116 5½' thermocouple with attachment clip and convection shield is supplied and is left attached when the tester is carried. For maximum usefulness in checking irons, washers, toasters, clothes dryers, etc., use appropriate accessory thermocouples. Tester price includes stitched Ever ready case, 5" wide x 5½" high x 2¾" deep, of sturdy, scuff resistant black vinyl. **$40.00**

IRON TESTER

MODEL 32-JIT. Self-contained bench-type tester; checks all makes of irons; measures thermostat temperatures; shows open or short circuits. Automatically compensated for room temperature. Also indicates operating temperature of the sole plate (working surface) on non-electric or cordless irons. Black metal base; overall size 10" x 12" x 5½", scale 0-650°F, 15 amp fuse, 6' cord, 110 volt, 50-60 cycles. **$42.50**

New...4 Logic Probe Integrated Circuit Systems Testers

Now... you can check logic levels in virtually any (DTL, RTL, TTL) IC system quickly and accurately. The small shirt pocket size Logic Probes indicate "True", "Zero" and "Infinity" readings precisely through two, color-coded readouts in the probe end or tip.

All units are rugged, solid-state instruments in attractive chrome-finished steel cases. An Input impedance of greater than 150 K ohms at the Logic "1" level prevents excessive loading of the circuit under test. Power is derived from the equipment being tested.

Use Logic Probes for field service, inspection, monitoring, production line checkout, or Engineering lab circuit designing.

Description

The RCA WV-38A Volt-Ohm-Milliammeter is a rugged, accurate, and extremely versatile instrument designed for service calls, industrial applications, and all-around shop and lab use. The extra-low 0.25 and 1.0 volt DC ranges are specially useful for servicing all types of low-voltage circuits. The wide range current scales are of value in adjusting color TV receivers, TV cameras, and power-supply drains. The ohms scale can be used for trouble-shooting all types of circuits and electronic parts. The special dB scales are ideal for high fidelity and broadcast-audio tests.

A convenient function switch is provided with AC, +DC, and —DC positions. The +DC and —DC positions of this switch reverse the polarity of the test leads — a feature that is also helpful in checking the front-to-back resistance ration of electrolytic capacitors and many types of semiconductor device

Two special silicon diodes are used to protect the meter movement against burnout due to accidental overload. A fuse protects the precision multiplier in the ohms network.

The WV-38A is completely portable, requiring no external power source. Five internal batteries (not provided) are used fo the ohms function (4 penlight cells and 1 "D" flashlight cell).

Description

The RCA VoltOhmyst® WV-77E is designed to measure AC rms sine-wave voltages from 0.1 volt to 1500 volts, DC voltages from 0.02 volt to 1500 volts, peak-to-peak voltages from 0.2 volt to 4000 volts, and resistance values from 0.2 ohm to 1000 megohms. The AC voltmeter portion of the WV-77E features an electron tube as a full-wave signal rectifier. The meter reading in AC-voltage measurements is a function of the full peak-to-peak value of the measured waveform. The WV-77E has a high input impedance on all DC- and AC-voltage ranges. This high input impedance allows the use of the WV-77E in circuits where instruments with a lower input impedance would result in loading of the circuit under test, and a resultant error in reading the operating voltage.

The VoltOhmyst utilizes a push-pull balanced DC-bridge circuit with the meter in the plate circuit. This circuit affords excellent linearity of response, good stability, and very high input impedance.

Additional features of the WV-77E include provision for zero-center indication, useful in discriminator and bias measurements; separate scales for low AC-voltage measurements to assure accurate readings; a circuit design which allows measurement of AC in the presence of DC; a separate DC probe with a 1-megohm resistor which minimizes capacitance-loading effects; and electronic protection against meter burn-out. In addition, the resistors in the resistance divider network are protected by a separate fuse.

- **11 megohm resistance on all DC ranges**
- **Supplied with DC/AC Ohms probe with shielded input cable**
- **Mirror scale meter—movement electrically protected against burnout**

Description

The WV-500B VoltOhmyst is a solid-state, battery-operated electronic voltmeter. The instrument measured DC voltages from 0.01 to 1500 volts, DC current from 2 microamperes to 1500 milliamperes, AC (rms) voltages from 0.1 to 1500 volts, AC peak-to-peak voltages from 0.5 volts to 4200 volts, and resistance values from 0.2 ohms to 1000 megohms.

Seven overlapping ranges are provided for AC rms and resistance measurements, and eight ranges are provided for DC voltage and current measurement. Accuracy for the DC and AC rms functions is ±3% (of full scale reading).

The WV-500B has an input resistance of 11 megohms on all DC ranges to prevent overloading the circuit under test.

Special solid-state circuitry is used in the WV-500B to assure stable, drift-free operation with minimum effect due to temperature variation. Advantages of solid-state construction include the elimination of warm-up time and a reduction in zero-shift that can occur in tube-operated voltmeters.

Since the WV-500B is battery-operated, the measuring circuit is completely isolated from the ac power line. The instrument can be used to make measurements on equipment with high ground potentials, an important feature in many industrial and laboratory applications.

Additional features include zero-centering of the meter pointer, and a circuit design that permits measurement of the ac component of an ac signal. The meter movement of the WV-500B is electrically protected against burnout.

Description

The RCA WV-120A and WV-503A Power-Line Monitors are designed for use by industries, laboratories, and radio-TV and appliance repair shops where it is important to know the power-line voltage at all times. These instruments provide a continuous, accurate indication of the AC line voltage at a glance, without the inconvenience of handling probes and switches or the necessity of selecting one of several scales to determine the proper meter reading.

Usd in conjunction with a variable isolation transformer, an RCA Power Line Monitor is a valuable aid in selecting line voltages for such applications as TV servicing, test instrument calibration, and the operation of electronic equipment that requires a known line-voltage supply.

The RCA WV-120A and WV-503A Power-Line Monitors provide a continuous, accurate indication of the AC line voltage at a glance.

Both instruments can be used on AC power-line sources with frequencies of 25 Hz to 400 Hz. They feature accuracy of ±2% at 120 and 240 volts, ±3% at scale ends. The meter has a special expanded scale with large, easy-to-read voltage designations. Also, the tip of the meter pointer is made wide enough to be seen clearly at a considerable distance from the instruments. As a convenient means of reference, the nominal AC line-voltage standard of 120 or 240 volts is printed in red.

The meter movement is a moving-vane type. This type of meter indicates rms values even when the waveform of the power-supply voltage is distorted. (Peak reading and peak-to-peak reading AC voltage measuring circuits, such as used in conventional VTVM's are calibrated on the basis of pure sine-wave voltages, and such meters do NOT indicate the true rms value of distorted waveforms.) The meter movement is only slightly damped and therefore has fast response. This feature is highly desirable because it permits the meter to indicate the presence of line-voltage "bounce" or fluctuations.

Super-Portable 3-Inch Oscilloscope

Type WO-33A

RCA

Test Equipment and Accessories

$180.00*

Features

- **Flat response to 5.5 MHz handles 3.58 MHz color TV signals with ease**
- **Exceptional sensitivity — .003 rms volt-per-inch for working with extremely low-level input signals**
- **Built-in calibration circuit and graph screen for direct reading of peak-to-peak voltages — as easily as with a VTVM**
- **Frequency compensated 3-to-1 vertical attenuators**
- **Supplied with shielded direct/low capacitance probe and cable**

Description

The RCA Super-Portable 3-Inch Oscilloscope will help you solve virtually any electronics servicing problem you may encounter inside or outside the shop. The low cost and high performance of the RCA WO-33A have made it popular as a monitor and trouble-shooting 'scope in black-and-white and color TV broadcasting studios, and in professional service shops.

High gain and exceptional bandwidth make this instrument ideal for general servicing and alignment work in black-and-white and color TV trouble-shooting, signal tracing, and measurement; for audio high-fidelity and stereo work; for all types of sweep alignment; and in all types of computer and industrial applications.

A novel feature of the WO-33A is the Vertical Input Attenuator which automatically switches the amplifier from Wide Band to Narrow Band when in the three highest gain positions.

A phase control is provided for varying the phase of the internal sweep voltage when the "LINE" position of the H/SWEEP SEL control is used, enabling the WO-33A to be phased with an external line-frequency sweep oscillator.

The WO-33A is equipped with a specially designed, single-unit Direct/Low-Capacitance probe and cable (WG-349A). When the Low-Capacitance input is used a special high-impedance circuit in the probe is connected in series with the test point and the 'scope, reducing circuit-loading effects and permitting the WO-33A to be used in circuits which would not function properly if loaded down by a conventional oscilloscope.

Description

The WO-505A is a solid-state, high-performance oscilloscope designed for general purpose use. Features such as a flat-face cathode-ray tube, return-trace blanking, illuminated graph screen, and camera mounting studs make this oscilloscope ideally suited to industrial, laboratory, and servicing applications.

Frequency response of the vertical amplifier is flat, ±1 dB, from DC to 5 MHz, and is usable up to 10 MHz. The oscilloscope has exceptionally high gain of 15 millivolts peak-to-peak per inch on the high-sensitivity range.

The sweep frequency is adjustable up to 1 MHz in 6 ranges, permitting lock-in of signals up to 10 MHz. The level of sync signal applied to the sweep oscillator is adjustable, so that synchronization is stable throughout the sweep range. Pre-set TV V and H sweep positions are provided for convenient television servicing. These positions insure automatic lock-in on vertical and horizontal sync and blanking pulses. A separat phase control varies the phase of the sweep voltage when th "LINE" position of the sync or H amplifier switch is used. Thi control is used in TV alignment for phasing the oscilloscop sweep with the output of a sweep generator.

The vertical input attenuator and the graph screen ar calibrated directly in volts so that the WO-505A can be use as a visual voltmeter. An internal calibrated voltage source i provided.

Terminals are located on the back of the case for direc connection through internal capacitors to the vertical deflectio plates of the cathode-ray tube. This feature makes it possibl to observe rf waveforms with frequencies higher than th bandwidth of the vertical amplifier.

The power supply of the WO-505A is regulated, preventin trace bounce due to line voltage fluctuations.

escription

e RCA WR-50B RF Signal Generator is a highly versatile, adily portable test instrument designed for use in the shop or the field for general television and radio servicing and ner applications.

The unit is particularly well suited for such applications as gnment and signal tracing of AM, FM, High-Fidelity and tizens' Band receivers, alignment of low-frequency IF plifiers in television receivers, and signal tracing and trouble-ooting in nearly all sections of television receivers.

The 455 kHz and 10.7 MHz sweep positions make the WR-50B rticularly useful for sweep alignment of both AM and FM ceivers, especially since the introduction of several new M-FM transistor radios in which sweep alignment of both rcuits is recommended.

The variable oscillator covers the fundamental frequencies from 85 kHz to 40 MHz in six ranges. For higher frequencies, harmonics of the high range can be used. A vernier tuning control permits precise setting of the output frequency. The RF output can be modulated with the internal 400 Hz oscillator, or with an external audia signal. The modulation level is adjustable.

A two-position attenuator switch, together with a variable attenuator control provide complete adjustment of the RF ouput level.

The crystal oscillator circuit in the WR-50B enables the instrument to be used as a crystal calibrator. A convenient crystal socket is provided on the panel. This crystal oscillator can be used as a frequency calibration reference for the variable oscillator, or can be used directly as a crystal-controlled signal source.

Chro-Bar Solid-State Color-Bar Generator

Type WR-502A

RCA Test Equipment and Accessories

$148.50*

Features

- **All solid-state circuitry**
- **Sound carrier, pattern, RF output, and color subcarrier all crystal controlled**
- **Rock-solid stability**
- **AC line or battery operated — completely portable**
- **Provision for spare battery with selection switch**
- **Battery test meter**
- **Gun killer switches**

Description

The RCA WR-502A CHRO-BAR is a solid-state, battery operated color-bar generator, designed to provide the test signals required for adjusting convergence, color-phasing, matrixing, purity, and linearity of color television receivers. Patterns generated by the CHRO-BAR include color bars, dots, crosshatch, vertical lines, horizontal lines, and blank raster.

The instrument includes slide switches for shorting out the control grids of the color picture tube. This feature enables the red, blue, or green color guns to be "killed," as required in convergence and purity adjustments. Leads are provided for connection to the control-grid leads of the color picture tube socket.

The color-bar pattern provides ten bars simultaneously, including R-Y, B-Y, I and Q signals, spaced at 30 degree phase intervals. This pattern is for use in checking color phase and matrixing circuits, and adjusting the automatic frequency phase control. (AFPC). Narrow brightness pulses are added at the edges of each color bar to aid in checking the "fit" or registration of the brightness and color signals.

A crystal-controlled 4.5 MHz sound carrier is added to the color-bar pattern in the "PATTERN & SOUND CARRIER" function. This sound carrier produces beats in the color-bar signal to permit making an accurate fine tuning adjustment.

The dot pattern provided by the WR-502A is used primarily convergence adjustment. The crosshatch, vertical line, and horizontal line patterns are for use in adjusting linearity in both black and white and color receivers, and as an alternate pattern for adjusting convergence. The crosshatch pattern, consisting of a fixed number of vertical and horizontal lines, can also be used to check receiver overscan adjustment.

The blank raster function is useful for both purity and color temperature adjustments.

Crystal-controlled RF output is provided on channel 3 (WR-502A), or channel 4 (WR-502AVI). The output cable connects directly to the antenna input terminals on the receive

The WR-502A is powered by a 4.2 Volt mercury battery. As convenience, the instrument has provision for an alternate battery that can be switched in easily when the first battery becomes weak. A meter is provided on the panel to indicate the condition of the batteries. For AC line operation, a separat AC adaptor is included.

RCA Test Equipment and Accessories

$375.00*

Features

- **Fundamental sweep output on all VHF TV channels**
- **Video and IF sweep output for IF amplifiers, video, and chroma circuits**
- **New ChromAlign chroma sweep signal**
- **Seven crystal IF markers for checking IF picture, sound, video, and color bandpass**

- **High, flat sweep output voltage at least 10 MHz wide on VHF channels**
- **On-off blanking control**
- **Balanced, 300-ohm RF output from low-leakage piston attenuator**
- **Sweep output on FM band from 88 to 108 MHz**

Description

The WR-514A TV Sweep Chanalyst has the combined features of a sweep generator, marker generator, and marker adder. RF, IF, video and ChromAlign output sweep signals permit alignment of VHF tuners, IF amplifiers, video amplifiers, and color bandpass amplifiers.

Seven crystal-controlled, IF markers are provided to identify points on the sweep curve. Marker frequencies are 4.5 MHz, 41.25 MHz, 41.67 MHz, 42.17 MHz, 42.67 MHz, 45.75 MHz, and 47.25 MHz. If desired, an external marker generator can be used to provide markers at other frequencies. A "spare" marker function can be used to provide another marker at any frequency from 39 to 50 MHz when a crystal of the desired frequency is inserted. This system of adding the markers prevents distortion of the sweep curve caused by marker overload. The marker signals are also available directly through a panel connector. Audio modulation can be applied to the signals when the signal is used separately for applications such as trap alignment.

RCA's special ChromAlign chroma sweep signal, combining a 45.75 MHz carrier and an IF sweep signal is provided for aligning color bandpass amplifiers. Both the sweep level and carrier level are adjustable, so that the circuit can be aligned at the signal levels specified in the receiver manufacturer's service data.

RF sweep output is provided for each of the 12 VHF television channels. The sweep width of the RF, IF, and video sweep signal is continuously adjustable.

Output voltage of all sweep signals at the maximum setting of the attenuator is at least 0.1 volt RMS. Maximum variation of output amplitude is 0.1 dB/MHz over any 10 MHz portion of the sweep signal, assuring an accurate display of circuit bandpass characteristics.

The WR-514A also provides FM sweep output from 88 to 108 MHz in two ranges. The sweep width is adjustable up to 20 MHz. A sweep signal in the 10.7 MHz FM IF range is also available. Markers in this frequency range can be applied using an external RF signal generator.

Return-trace blanking is included in the WR-514A to provide a zero-reference line during alignment. A trace reverse switch is provided for selection of horizontal sweep direction so that frequency markers are in proper sequence as illustrated in TV service manuals.

A switch is also provided for bypassing the demodulated signal amplifier, connecting the signal directly to the oscilloscope. This permits the vertical gain of the sweep trace to be calibrated.

Description

The RCA WR-99A Crystal-Calibrated Marker Generator combines in one compact instrument the functions of a multiple-marker generator, crystal calibrator and a heterodyne frequency meter. Featuring extreme accuracy and stability over a wide frequency range, the WR-99A is ideal for servicing and aligning color and black-and-white TV receivers, communications and other equipment operating in the frequency range of 19 to 260 MHz.

When used as a heterodyne frequency meter, the frequency of an unknown signal can be quickly measured by feeding it into the instrument and reading the frequency directly from the dial.

The WR-99A includes crystal-controlled 10 MHz and 1 MHz oscillators for calibrated accuracy. The VFO frequency as well as the frequency of an external signal may then be checked against internal calibrating beats at 1 or 10 MHz intervals throughout the tuning range.

A switch-type attenuator in the WR-99A provides attenuatio in continuous steps over a range of 60 dB on all frequencies. Double shielding of the oscillator reduces leakage to well belo the full attenuated signal; permitting control of marker amplitude right down to the noise level of TV receivers. A special coaxial cable is provided with the unit for coupling into the test circuit.

The VFO signal also may be modulated internally with both 4.5 MHz and 600 Hz, a useful feature for adjustment and alignment of sound-IF amplifiers and detectors. The 4.5 MHz signal produces dual sound and picture markers; the 600 Hz modulation will produce a horizontal-bar pattern when the output signal is set to the frequency of the picture carrier or picture intermediate frequency. The 4.5 MHz output signal may be modulated with 600 Hz for visual alignment of the detector.

Description

Completely portable and requiring no external power source, RCA's WT-501A tests transistors both in-circuit and out-of-circuit, tests both low and high-power transitors, and has both NPN and PNP sockets to allow convenient transistor matching for complementary symmetry applications. Three color-coded test leads are provided for in-circuit testing. Special low-impedance circuitry assures reliable in-circuit testing.

The instrument is designed to test transistor for dc beta from 20 to 1000, collector-to-base leakage (Icbo) as low as two-microamperes, and collector-to-emitter leakage (Iceo) from 0 microamperes to one-ampere. Collector current is adjustable from 20 microamperes to one-ampere in four ranges, permitting most transistors to be tested at their rated current level.

Power transistors can be tested with Ic up to one-ampere. A DC forward current transfer ratio curve can be plotted. The instrument can also test the relative in-circuit DC current gain of a transistor.

A 100 microampere meter movement is used in the measuring circuits for the various test functions, and precision resistors are used to insure accurate test results. Normal maintenance includes only replacing the batteries as neccessary.

The WT-501A is also a convenient instrument for making a check of the relative front-to-back ratio of diodes. An important feature is the ability to check the diode at an appropriate current level.

)escription

ıe WP-700A, 702A, 703A, and 704A are solid-state, constant ɔltage dc power supplies. These versatile bench-type supplies re ideally suited for use in circuit design, servicing, dustrial, and educational applications. Typical applications clude developmental transistor or integrated circuit rojects, production line testing of dc operated equipment, dustrial maintenance, life testing of devices that require dc supply, and classroom use.

The WP-700A and WP-702A circuits are identical, except that e WP-702A is a dual unit, with separate controls, output rminals, and meters for each section. The two sections of the P-702A are electrically isolated from each other.

Output voltage of the WP-700A and WP-702A is continuously djustable from 0 to 20 volts, at current levels up to 200 illiamperes.

Output voltage of the WP-703A is continuously adjustable ɔm 0 to 20 volts at current levels up to 500 milliamperes.

The output voltage of the WP-704A is adjustable from 0 to 40 volts at current levels up to 250 mA.

Overload current is limited to prevent damage to the power supplies. No damage will occur even if connected to an external short circuit. A special overload indicator panel lamp will begin to glow when the current approaches the maximum rated level.

A meter is provided to indicate either output voltage or current level. The meter function is selected by a convenient panel switch

All silicon transistors and diodes are used in the four supplies. Circuit design features include a negative feedback circuit to maintain constant output voltage with low ripple regardless of varying line.

Three convenient output terminals (+DC, —DC, and GND) are provided. The units are equipped with a three-wire ac power cord to permit connecting the external circuit to the power line ground, using the "GND" terminal.

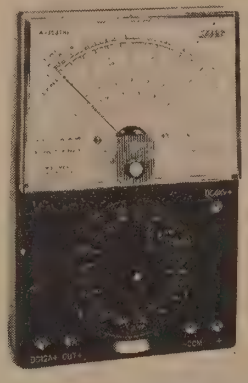
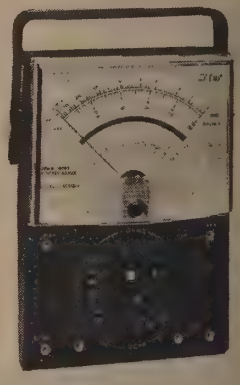
NEW B-45TRd
MODULAR CONSTRUCTION, EASIER TO USE, GREATER CONVENIENCE

The new Sanwa B-45TRd multitester is made of three detachable components — a plug-in meter, a plug-in separate control panel, and a base. The meter block can be plugged in above or below in the base case, whichever is most convenient for operation.

Should a meter or control panel need calibration or repair when damaged, replacement with a spare plug in part will immediately put the instrument back into use. A



remarkable new concept from Sanwa! Plug-in meter blocks and control panels are available from stock.



thirty years and eighty countries later, we're ready for the U.S.A.

TR SERIES MULTITESTERS

Besides performing as wide range circuit testers, the Sanwa TR Series Multitesters serve as simplified semiconductor checkers. The LI and LV scales indicate characteristics of semiconductors like transistors, diodes, thermistors, etc. ■ Sensitive movements from 35 to 100 microamperes, and low DC voltage ranges (0.25V ~ 2.5V) efficiently check transistor circuits. High input impedance obtains accurate measurement. ■ The DC ranges of 50 μA ~ 100 μA read the reverse current and I_{co} of semiconductors. Forward and back current, and resistance I_c and I_{ceo} of in circuit transistors are checked on the LI scale.

†Simpson VU meters meet all the Electrical and Ballistic specifications established by Bell Laboratories and American Standards Association as required by broadcasting, communication and sound engineers. They are available with either type A or B scales. Type A scale stresses the level in VU for monitoring wire lines. Type B scale stresses percent use of transmitter output and is the standard for broadcast service. Impedance is 3900 Ω @ "0" VU deflection.

CLEAN, UNCLUTTERED LOOK

MAXIMUM READABILITY IN MINIMUM HEIGHT

3½" Models

4½" Models

Made for today's compact equipment designs—without sacrificing readability. The 4½" 524 models take up less than 3" of panel height, yet the scale is over 3½" long. Clean and crisp look, too. Excellent reliability, they feature self-shielding spring-backed jewel movements and ±2% accuracy. Attractive case is molded black phenolic, with glass window.

pson VU meters meet all the Electrical and Ballistic specifications estab-ed by Bell Laboratories and American Standards Association as required by adcasting, communication and sound engineers. They are available with er type A or B scales. Type A scale stresses the level in VU for monitoring e lines. Type B scale stresses percent use of transmitter output and is standard for broadcast service. Impedance is 3900 @ "0" VU deflection.

†Simpson VU meters meet all the Electrical and Ballistic specifications established by Bell Laboratories and American Standards Association as required by broadcasting, communication and sound engineers. They are available with either type A or B scales. Type A scale stresses the level in VU for monitoring wire lines. Type B scale stresses per cent use of transmitter output and is the standard for broadcast service. Impedance is 3900 Ω at "0" VU deflection.

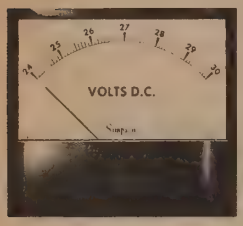
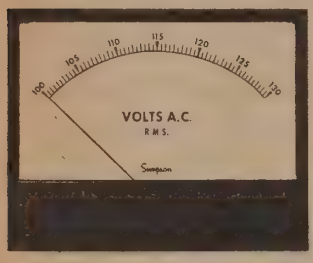
SIMPSON AVERAGE SENSING, TRUE RMS AND DC SEGMENTAL INSTRUMENTS



Segmental Voltmeters and frequency meters make it possible to measure very small changes in input conditions. The significant portion of the overall voltage or frequency range is expanded to occupy the full scale length. Thus, only that segment of the range that is important appears.

A.C. segmental voltmeters are available in either average sensing or true R.M.S. sensing units. When working with sine wave currents or when other measurements will be made with average sensi equipment, the average sensing meters are preferre



When working with distorted waveforms, as wou be encountered in constant voltage transforme S.C.R. circuits, D.C. to A.C. solid state inverters similar equipment, the true R.M.S. sensing met would probably be preferred. In addition to t standard expansions and accuracies shown, spec segmental voltmeters can be built on special ord
